

Agenda
Catalog workgroup
August 26 2013, 1:00 – 3:00 pm
Rm. 272

- **Recording alert**
- **Request to have participants ID themselves before commenting or asking questions**
- Review purpose of Catalog of Florida Monitoring Programs
- FRD Progress and current updates
 - a. Final review and approval by Catalogue workgroup
- Walking line between providing enough information for the public, and limiting information to preclude data provider fatigue.

The recommendations have been made over the last two months during teleconferences with USF, the FDEP staff working on WIN, Catalogue workgroup members, and the FWRMC Coastal Monitoring Network workgroup. The purpose of the revisions to the metadata elements list is to:

1. Increase alignment between Catalog metadata elements and those of WIN;
2. Address Catalogue workgroup members' recommendations that have not yet been vetted;
3. Include metadata elements that can be used to describe biological monitoring in either coastal or fresh waters;
4. Increase the picklist/domains associated with metadata elements to capture coastal monitoring;
5. Reduce the number of elements to minimize data provider fatigue.
