Hey Ben, I think I sent the email to you but please see below, DEP is not going to need to do a 404 permit for this one since the only "fill" is the pilings and they are not regulated under 404:
I can forward the email to you if you need.

Subject: FW: Incoming 404 Application - Ichetucknee Springs State Park Mid Point ADA Access Improvements_12

Hi Sarah,

We will not be processing this application as piling supported structures are not regulated as fill material under the 404 program.

Aaron,

We've re-submitted for the ERP. Have you heard anything back on the 404 for this project?

Ben and Aaron,

Attached is the Site Plan, Sheet C107, with the 4 tree replantings added. Take a look at let me know what you think.

Thanks!

Matt

Sounds good. I would use the language 2 inches DBH (Diameter at breast height) and maybe even specify that they will be 3 or 5 gallon pot size plants.

10-4. That's another thing we discussed. The 4 trees we replant will not be equal caliper to the trees removed (obviously) but they will be replaced and grow just fine.

Matt, let's add the note(s) to the site plan. Maybe 2" caliper black gum trees. Get some planting notes from Randall- he did a planting plan for that wakulla county project.

Ben,

I spoke with Aaron and discussed the tree replantings for the 4 trees removed and we think it can be handled with a note for the contractor to coordinate with the environmental scientist/inspector the final locations of the 4 trees along with our plans just showing 4 potential locations for each tree within the wetland line.

The environmental scientist is

Ben and Matt, just checking in on this one to see if you need anything else from me prior to you submitting the response

Thanks
Aaron

Aaron,

Received this.

For no. 1 – I think we have to take trees to get the ADA ramp slopes to work, we tried to minimize tree impacts. I'll respond accordingly.

No. 2 – DRMP will address

No. 3 – Can you help respond? I guess the boardwalk is a permanent de minimis impact. They will use heavy equipment to drive the new piles. Is there any specific notes we should add to protect the wetland soils?
