

The Interconnectedness Between Spring Creek Springs and Wakulla Spring and the Effects on Flow at Wakulla Spring

U.S. GEOLOGICAL SURVEY

In Cooperation With the
**Florida Dept. of Environmental Protection-
Florida Springs Initiative**

**Tallahassee, Florida
2011**

Where does the spring water come from?

Wakulla and Spring Creek Springs are both large first magnitude springs.

Wakulla Springs – Spring Creek Springs Springshed

Average Flow in
Wakulla Springs ~ 500 cfs

Spring Creek #1

Spring Creek #10

0 0.15 0.3 0.6 Miles

There Are Two Major Sources of Water to the Springs:

1. Widespread Recharge in the Springshed
2. Intermittent Flow into Sinks (can range up to 3,000 cfs for short periods)

Lost Creek Sink is Especially Important

The Interaction of Wakulla Springs and Spring Creek Springs can be Explained in a 3-Cycle Process.

This is Cycle 1:

Extended Low Rainfall Conditions

**This is Cycle 2:
High Rainfall
Conditions**

**This is Cycle 3:
Low Rainfall
Conditions
Following High
Rainfall**

Extended Low
Rainfall Conditions**

Salinity in Spring Creek is Determined by Flow into Lost Creek Sink

High Flows into Lost Creek Causes the Water in Spring Creek to Rapidly Freshen and It Will Remain Fresh Long After Lost Creek Flow Subsides

The Salinity in Spring Creek Springs Influences Where Groundwater Flows

The Freshwater Head in Spring Creek Springs (Corrected For Salinity) Ranges From Sea Level to About 8 ft

The Water Level in Wakulla Springs is a Relatively Constant 5 Feet

Discharge in Spring Creek Springs

Examples of Discharge Data and Tide Data

**Net Discharge in
Spring Creek
Springs is Variable**

**Spring Creeks
Springs Has Periods
Little Net Outflow
And Periods of High
Net Outflow**
