LETTER OF TRANSMITTAL

Florida Geological Survey
October 1999

Governor Jeb Bush, Chairman
Florida Department of Environmental Protection
Tallahassee, Florida 32301

Dear Governor Bush:

The Florida Geological Survey, Division of Resource Assessment and Management, Department of Environmental Protection, is publishing "The Industrial Minerals Industry Directory of Florida" as its Information Circular No. 112. This directory lists the operators' names, their commodities and locations. Only those companies involved in mineral and earth resource extraction and processing in Florida are included.

The directory will be useful to industry, state and local governmental agencies, geologists, and the citizens of the State. The Survey's intention is to help the reader realize the economic impact mining has in Florida, and its importance to our way of life. This information should assist state and local planners with land-use plans, and making wise land zoning decisions.

Respectfully yours,

Walter Schmidt, Ph.D., P.G.
State Geologist and Chief
Florida Geological Survey

ACKNOWLEDGEMENTS

The author wishes to thank the mining community for their assistance in relating pertinent data for this text. In addition, a special thank you goes to the staff of the Florida Department of Environmental Protection, Bureau of Mine Reclamation; the staff of the Florida Department of Transportation, Bureau of Materials and Research; and the U.S. Department of Labor, Mine Safety and Health Administration, for providing information on the mining operations in Florida. The author appreciates the efforts of the staff of the Florida Geological Survey, especially Ed Lane, Jackie Lloyd, Deborah Mekeel, Walt Schmidt and Tom Scott for reviewing this report and making suggestions.

**THE INDUSTRIAL MINERALS INDUSTRY DIRECTORY
OF FLORIDA**

Compiled by

Steven M. Spencer, P.G.#319

INTRODUCTION

The intent of this publication is to list those companies involved with the extraction of non-energy related industrial minerals in Florida. The figure on page vi is a generalized map showing the principal mining localities in the State. Information relating to oil and gas production in Florida can be found in the Florida Geological Survey Information Circular No. 111 (Lloyd, 1997). The shell deposits listed under the Limestone category often are quartz sands with shell in them. Therefore, the shell deposits are not limestone in the classical sense.

This directory lists the name, address, and location of each company under the commodity that is mined. When possible, the complete location is given as Township, Range, and Section. However, the term "multiple," which occurs in the column labeled Mine Name, denotes that a particular mine encompasses several sections of land. The remark "not available" indicated by N/A, is used when a particular item was not obtained. Table 1 lists all the abbreviations used in this text. Table 2 is a listing of all commodities, by county. These commodities may be mined or processed in the designated county.

The Florida Geological Survey has used numerous sources in compiling the directory including the Department of Environmental Protection's Florida Geological Survey and Bureau of Mine Reclamation; the Department of Transportation's Bureau of Materials Research; the U.S. Department of Labor's Mine Safety and Health Administration. This office will appreciate notification of any corrections, additions or deletions for future editions. You may contact the author at the Florida Geological Survey, 903 W. Tennessee Street, Tallahassee, Florida 32304-7700, (850) 488-9380, FAX (850) 488-8086, or e-mail steve.spencer@dep.state.fl.us.
