FLORIDA GEOLOGICAL SURVEY
TALLAHASSEE, FLA.
1961

EXPLANATION
Observation well
(Hydrographs are shown for these selected wells)
Contour represents the height, in feet referred to mean sea level, to which water would have risen in tightly cased wells that penetrate the major water-bearing formations in the Floridan aquifer, July 6-17, 1961.
Contour interval 10 and 20 feet, changing at mean sea level.
