The well and soil quality system used in this report uses the rectangular system for soil and water, i.e. for boundary, pollution, soil type and detailed information. The well and the output surface consist of a series of maps for soil, water and the 3D model for pollution and the accident. The shape and position of the accident are shown on the map. The map shows the accident area in the form of a grid. The position of the accident is shown on the grid. The position of the accident is shown on the grid.
