Thermometer Calibration Log
(Use with Fluke Calibration Bath)

****Note:** Unless specified otherwise, a lab thermometer is considered to be in calibration if the temperature it records is within ± 0.5 °C of the temperature of the Reference, Calibrated, NIST-Traceable Thermometer.
Lab thermometers should be calibrated at a minimum of two distinct set-point temperatures that bracket the range of intended use of that thermometer. For devices such as incubators and ovens that have a very limited range of use (≤ 10 °C), only a single point calibration is necessary.

Reference Thermometer ID: Fisher High-Accuracy Platinum Thermometer, Model 15-081-108, 13597070

Reference Thermometer S/N: 200599946 Reference Thermometer Exp. Date: 6-Oct-2022

Reference Thermometer S/N: Reference Thermometer Exp. Date:
