Post Office Box 272000  
Tampa, Florida 33688-2000

Dear Mr. Yarbrough:

PA 89-25, Hardee Power Station  
Seminole Electric Cooperative, Inc.

The Bureau of Wetland Resource Management staff has reviewed the additional information submitted for the transmission line between Vandolah and South Arcadia for sufficiency and has determined the information to be insufficient. We have the following questions and comments.

1. In the original submittal, 0.11 ac. of Wetland GG was to be forested clearing. In the additional submittal, no clearing at Wetland GG is indicated. Please explain why clearing is no longer needed. In addition, a type of hatching is used in the plan view that is not defined in the legend. Please define the hexagonal pattern in the legend.
2. Please explain why the corduroy road originally proposed for Wetland KK has been replaced with two 36" CMP.
3. Please clarify how the final grade of the fill pad in Wetland NN went from 77.0 ft. to 79.0 ft. without increasing the wetland fill acreage.
4. Please explain why clearing of all the forested portions of Wetland OO within the ROW is not proposed.
5. Please define the hatching used in the ditch for Wetland XX in the legend on the drawing.
6. On Figure 43, 44, please explain why the ac. of clearing impact has been reduced while the drawing of the proposed work has not

changed. If Wetland QQQ is non-jurisdictional, please revise the drawing to reflect that.

If you have any questions, I can be contacted at (904)488-0130.

Sincerely,

A handwritten signature in cursive script that reads "Trudie D. Bell".

Trudie D. Bell
