Notice of Application for Site Certification

Re: JEA St. Johns River Power Park Unit 3 Combined Cycle Project

JEA is committed to delivering reliable and sustainable services that meet the needs of our community. As part of that commitment, we are investing in the St. Johns River Power Park (SJRPP) Unit 3 Combined Cycle Project to help diversify our energy mix, strengthen electric grid reliability, and support increasing demand across Northeast Florida.

On June 5, 2026, JEA submitted an Application for Site Certification to the Florida Department of Environmental Protection (FDEP) seeking authorization to construct and operate a new natural gas combined cycle generating facility and associated onsite infrastructure at JEA's existing St. Johns River Power Park site.

The proposed facility will primarily operate on natural gas, with ultra-low sulfur diesel (ULSD) available as a backup fuel source. Once operational, the facility is expected to provide approximately 678 megawatts of reliable electric generation capacity. That's enough to power an estimated 300,000 homes. The project is currently scheduled to begin generating electricity by 2031.

As part of the project development process, JEA hosted a public open house earlier this year to provide information about the project, answer questions, and gather feedback from customers and neighbors. We appreciate the participation and input received during that event.

The application is available for public review at floridadep.gov/water/siting-coordination-office/content/jea-st-johns-river-power-park-unit-3-power-plant-project.

To learn more about the project, please visit jea.com/sjrpp3and4. If you have questions, please contact JEA Project Outreach at projectoutreach@jea.com or call (904) 665-7500.

Sincerely,

JEA
