Re: Georgia Pacific Corp. - Pollution Control Devices
Acct. 821328, Acct. 821142, and Acct. 821411

Dear Mrs. Denton:

On June 27, 2000, I sent letter containing the following: "I have reviewed the Returns of Pollution Control Equipment for the Georgia Pacific Corp., as attached to your letter of June 7, 2000. The list of pollution control equipment for Acct. 821142 Chip Mill appears eligible for assessment as pollution control devices pursuant to Section 193.621, Florida Statutes. The list of pollution control equipment for Acct. 821411 has no justification or explanation from Georgia Pacific's engineer. The item 16113900006 - Pollution Control Comp FR112 may be eligible, but I don't know what it is or what it does nor do I know the pollution control function of the waste conveyor. I, therefore, can not certify as to their eligibility. For the paper mill, Acct. 821328, most of the equipment is primarily for the purpose of pollution control. However, the list contains some items such as soot blowers, turbines, forced effluent mains which are not primarily for the purpose of pollution control. There is no engineer's justification or explanation and no way for me to associate a lot of the equipment with a pollution control function."

On September 15th Georgia-Pacific provided additional information. Based on the information provided, I now find the effluent pipeline in Acct. 821328 to be eligible for assessment as a pollution control device pursuant to § 193.621, Florida Statutes. In my opinion, the primary purpose of the soot blowers is to increase boiler efficiency not pollution control. By their action, they actually cause a temporary increase in particulate emissions from the facility. I do not find them eligible as pollution control devices.

If I can be of any further assistance in this matter, please contact me at Suncom 277-0472 or (850) 487-0472.

Sincerely,

Hamilton S. Oven

Re: Returns for Georgia-Pacific Corporation Pollution Control Devices
Account No. 821328

Dear Mr. Oven:

In reference to Georgia-Pacific Palatka Pulp and Paper Operations' list of pollution control devices, I would like to make the following statements regarding applicability to pollution control:

The waste effluent pipeline, also listed as effluent pipeline or forced effluent main, is an integral part of Georgia-Pacific's secondary wastewater treatment system. Pumps force wastewater from the outlet of the primary wastewater clarifier in a 48" inch diameter, two mile long, lined pipe to the inlet of a large aerated stabilization basin. The listed items refer to replacement of various sections of this pipe, which were installed solely for the purpose of wastewater treatment — pollution control.

The listed sootblowers are used in our power boiler, combination boiler, package boiler, and recovery boiler. The function of a soot blowing system is to remove slag and ash deposits from the boiler, superheater and economizer tubes. The combustion deposits are then captured in pollution control devices, except in the case of the power boiler. The removal of these combustion deposits increases boiler efficiency by increasing the heat transfer from the flue gases to the tubes and by decreasing the resistance to gas flow through the boiler. By increasing boiler efficiency, less fuel is burned, which results in less emitted pollutants. Thus, I maintain that the listed sootblowers are indeed used for pollution control.

Please do not hesitate to call me at (904) 325-2001, extension 4672, should you have any questions.

Sincerely,

Tobin Finley, P.E.

Acct. 821142 Chip Mill
Acct. 821411 Soft Wood Lumber Mill

Dear Mr. Oven:

Enclosed you will find the Return of Pollution Control Devices for the above referenced accounts in our county.

Would you please review this information and advise me as to what qualifies for assessment as pollution control devices under Section 193.621, Florida Statutes. If you need any additional information, let me know. Thank you for your assistance.

Sincerely,

(Mrs.) Marsha B. Denton, C.F.E.

Re: Property Owner: Georgia-Pacific Corp.
Environmental Equipment Listing & Documentation
821328 - Paper Mill
833633 - Plywood Mill
821142 - Chip Mill
821411 - Softwood Lumber Mill

Dear Marsha,

Attached is information regarding our pollution control exemption on our returns this year. We discussed the differences on the plywood mill last year. Some of the coding did not get changed in time, so the equipment that was determined not to be pollution control last year was reported again as pollution control.

I have attached an e-mail message from the same engineer who addressed the specific equipment at the plywood mill last year. I also enclosed a copy of her letter from last year that indicates she is an engineer. She is explaining the uses of the equipment that were coded as pollution control for the chip mill and the lumber mill. As it turns out, the equipment at the lumber mill is not environmental, but the equipment at the chip mill is.

I have attached a detailed list of the equipment for the paper mill that was reported as environmental. In addition to readily identifiable environmental systems, the list includes environmental aspects that are part of other pieces of equipment and components of environmental equipment that were replaced. I have also attached a report that indicates the locations in the mill. The LOC code should help identify what part of the mill the equipment is located in. This may help clarify the use of the equipment as environmental control equipment. I believe the list provided previously consolidated many of these assets into single assets.

Please give me a call if you have any questions.

Sincerely,

Brian A. Perry

To: Perry, Brian A.
Subject: RE: Pollution Control Equipment Putnam county FL

The two items at the sawmill are not environmentally related. The \$100K was for a pneumatic system, that actually added cyclones and therefore a pollution source. The other was just a conveyor, no environmental requirement or benefit there.

The chip mill's wash pad and washdown equipment is an environmentally related / required project. The mill has to wash equipment down, but they can not wash the oily mess onto the ground, therefore they have to have a wash pad. They have to have recycling wash equipment to clean and recycle the water because they can not discharge the wash water off the pad either. They don't have another option to dispose of the wash water so they have to recycle it. These two projects are environmentally related projects.

Subject: Pollution Control Equipment Putnam county FL
Importance: High

You were able to help me last year. Attached is a file of assets listed as being pollution control equipment in Putnam county. You answered my questions last year on the Plywood mill, so I don't need you to look either of those two sheets on the file. There are four assets - two at the chip mill and two at the softwood lumber mill. I have my doubts about the two at the chip mill, but I need something regarding the environmental nature of these assets -- particularly the softwood lumber mill.

RE: Georgia-Pacific Corporation-Hawthorne, FL
Pollution Equipment Tax Credit

Dear Ms. Denton:

The following letter is provided in response to your request to Mr. Brian Perry for a description of pollution control equipment and its function listed at the Georgia-Pacific Hawthorne Plywood facility.

1. **Sander Dust System:** This is a baghouse that collects sanderdust from the pneumatic system which is part of the sander system. The baghouse serves as an environmental control for air pollution control.
2. **Dryer Washdown System:** This equipment collects and screens water used to wash the dryer and then re-uses the water by re-injecting the water into the dryer for moisture. This provides two benefits for the environment. It provides pollution control by preventing discharge of the dirty water and reduces water consumption for moisture injection.
3. **Manual Deluge System:** this is a fire control system.
4. **Dryer Condensate, Vat Condensate, and Press Condensate** projects are all similar pollution control projects. The condensate collection systems collect condensate that is contaminated with boiler chemicals and recycles the water back to the boiler. This prevents the potential discharge of the contaminated water.

If you have any questions please call me at 904-329-9104.

Sincerely,

Margarete M. Vest, P.E.
