Sandra: Attached is an excel spreadsheet which lists the tangible personal property assets which we filed in 2003. We have highlighted, to the best of our knowledge, those assets which we feel represent environmental expenditures, capitalized maintenance, or items which don't add value commensurate with the costs. These include double bottoms on tanks to prevent leakage to the soil, geodesic domes which prevent water contact with product, automated tank gauges and alarms to prevent overflows, vapor recovery units, and a few other items which probably could be consider real property.

<<DCM1289726JaxTermPP123102.xls>>

As we mentioned in our hearing before the Valuation Adjustment Board, we feel the fair market value of the entire facility should not exceed \$4.5MM- \$5.0MM for ad valorem tax purposes and that the possibility of our selling the facility for this amount appears extremely slim. We think this is acknowledged by the appraisal which was submitted as evidence and the income approach which was discussed briefly at the hearing. A sale, which has seriously been considered and if it occurs, will probably confirm our expectations.

However, we do appreciate the opportunity to approach a settlement with the Property Appraiser's Office using the cost approach, but excluding assets or discounting the value of certain assets may not be enough to arrive at a fair market value. Functional and economic obsolescence, while difficult to quantify herewith, would account for the difference.

Nonetheless, I would personally like to thank the Property Appraiser's Office and Mr. Carlin for their understanding and concern in this matter. Should you have any questions, please feel free to contact me.

Bill
