CERTIFIED MAIL - RETURN RECEIPT REQUESTED

Mr. Mike Roddy
Manager, Environmental Affairs
Seminole Electric Cooperative, Inc.
16313 North Dale Mabry Highway
Tampa, FL 33688-2000

RE: Seminole Generating Station
Siting Case Number PA 78-10
One-Time Urea Water Disposal

Mr. Roddy:

On March 30, 2009 the Florida Department of Environmental Protection's (DEP's) Siting Coordination Office and the DEP Northeast District Office (NED) received a request (via email) for the approval of the one-time discharge of approximately 18,000 gallons of urea water into the percolation ponds at the Seminole Electric Cooperative, Inc. (SEC) Seminole Generating Station.

Additional information is needed prior to approval of this request. The DEP Northeast District Wastewater Section has the following questions and comments:

1. Please confirm that disposal of the urea product water is proposed to be discharged into the industrial wastewater ponds, only, and will not become intermixed with the surface water discharge system.
2. Based on the emailed MSDS sheet and sampling results of the urea product, it has a TKN level of 4,700 mg/L. If the urea product is disposed of into the wastewater pond, reasonable assurance must be provided to show that the ground water standard of 10 mg/L for nitrate will be met at the compliance well(s). Dilution calculations on the urea product with other sources are requested (i.e.: mixing with existing wastewater in the pond, ground water aquifer within the zone of discharge, fresh water, rainfall, evaporation, etc.). The calculations may need to include small amounts over a specific time frame. Dilution and attenuation factors can be evaluated using a contaminant transport groundwater model, also.
3. A suitable land application site could be evaluated for a one-time application as a beneficial reuse project. Depending on the site location and circumstances, a separate monitoring only permit may be considered.

4. Another option may be transporting the urea product to one of the larger domestic wastewater treatment facilities. A facility with no surface water discharge is more likely to accept it. The urea product may need to be slowly released over a specific time frame. Some of the closer facilities are City of Hawthorne in Alachua County, Midclay and Ravines in Clay County, and Dunes Community Development District, Matanzas Shores, and Plantation Bay in Flagler County. A preferred facility would be one with a Department approved industrial pretreatment program and accepts hauled waste. Dawn Templin, the Department's pretreatment coordinator in Tallahassee, at (850) 245-8601 can assist in providing a list of domestic wastewater treatment facilities in the Palatka area with approved pretreatment programs, if needed.
5. A possible alternative may be to install an in-line filter that will remove the solids, so that the urea product can be used for its intended purpose in the SCRs.
6. With the SCRs being a new ancillary process, reasonable assurance is requested indicating that acquiring a bad batch of urea product is not going to become a regular issue.
7. If one of the other options for disposal is chosen, a follow-up notification is requested.

If you have any questions regarding this request, you can contact Cindy Mulkey at (850) 245-2175 or Khalid AlNahdy, P.E., Wastewater Manager (NED) at (904) 807-3309. Mr. AlNahdy should be copied on your response.

Sincerely,

Michael P. Halpin, P.E.
Administrator,
Siting Coordination Office

The Siting Coordination Office is issuing electronic documents for modifications and other correspondence in lieu of hard copies through the United States Postal System to provide greater service to the applicant, agencies and other parties. Please advise this office of any changes to your e-mail address.

Thank you,

*Essie Turner
