Project Description
The Charlotte County Beach Nourishment Project is located between DEP monuments R173+400' in Sarasota County and R040+500' in Charlotte County. The Project contains multiple segments; the Manasota Key Beach Nourishment Project and the Charlotte Erosion Control Project (ECP). The projects include providing erosion control and shoreline stabilization measures including beach nourishment, maintenance dredging (sand bypassing), and stabilizing structures. The southern portion of the Project within Charlotte County was initially restored in 2003, and the first nourishment occurred in 2006. The most recent nourishment for Manasota Key and the South Beach Fill occurred in 2020, and the most recent nourishment for the ECP (Updrift Beach Fill, North Beach Fill, and Stump Pass) occurred in 2022. The requested funds are for third year post-construction monitoring for the ECP and fifth year post-construction monitoring for Manasota Key, the South Beach Fill, and the artificial reef. Staff have determined that 74.9% of the project is eligible for state cost sharing.
