Tony,

I have input the correct coordinates into the GIS map and the Project list both of which are posted online, I will forward this email to the Deepwater Horizon portal and it will be documented and kept for records, I'm not sure we can change it within the original pdf you submitted but we can have a record included in the supporting documents folder so when people reference it they can see that the Long was updated. I will have Jessica Kanes who maintains all the project proposals and updates send you a confirmation email and she may also know exactly how it will be documented for future reviews.

Thanks,

CHRIS ROBERTSON

Subject: Correct Long. for Regional Artificial Reef Plan

Chris,

Thank you for the request for clarification.

Yes, I inadvertently recopied the Latitude in the Longitude:

The correct information for BBCC1 is: 29°21'51.59"N and **85°19'34.12"W**

Is there a mechanism that this can be corrected in the final document for future reviews, please?

Please let me know if you have any additional questions or request clarification.

Thank you,

Tony Murray
