

Dune habitat restoration: Gulf Islands National Seashore and Santa Rosa Sound/Navarre, FL

General Information

Project Description:

The project consists of restoring 145 acres of dune habitats at three Gulf Island National Seashore locations and 130 acres of dune habitats along Santa Rosa Sound. The project also includes plant propagation and dune vegetation plantings. There have been smaller scale projects done in this area, but a large scale effort like this project is still needed. In addition, the project would include the infrastructure development of a series of greenhouses across the panhandle. (scalable)
