

**Appendix C2**  
**Cane Island Vascular Plant List**

## Appendix C2 Cane Island Vascular Plant List

Table C-2 is a list of vascular plant species observed at the CIPP and related offsite facility areas. The observations were made during the original site investigations (1991) and subsequent mitigation monitoring efforts (1993-2007).

The following list includes all vascular plants taxa observed within the KUA Cane Island site in Osceola County, Florida, during various botanical surveys from 1991 to 2007. For ease of reference, an alphabetical arrangement has been followed for families within classes, as well as for genera within families, and species within genera. Nomenclature used in this list follows Kartesz (1994). Family nomenclature is that of Thorne (1992) for the flowering plants and *Flora of North America* (1993) for ferns. Non-native taxa are indicated by an asterisk (\*) before the name. Plants considered sensitive by the Florida Department of Environmental Protection and the United States Fish and Wildlife Service are indicated by a dagger (†).

**Table C-2 (Continued)**  
**Catalog of Vascular Plants**

| Scientific Name <sup>1</sup> | Common Name <sup>2</sup>   | USFWS Wetland Indicator Status <sup>3</sup> | Florida Wetland Indicator Status <sup>4</sup> |
|------------------------------|----------------------------|---------------------------------------------|-----------------------------------------------|
| <i>Xyris jupicai</i> Richard | Richard's yelloweyed grass | OBL                                         | FACW                                          |

<sup>1</sup> Scientific nomenclature follows *A Synonymized Checklist of the Vascular Flora of the United States, Canada, and Greenland* (Kartesz, 1994).

<sup>2</sup> Common names are taken from The PLANTS Database, Version 3.5 (USDA, NRCS, 2002).

<sup>3</sup> Categories are taken from *National List of Plant Species that Occur in Wetlands: National Summary* (Reed, 1988). Acronyms are the following OBL = obligate wetland plant; FACW = facultative wetland plant; FAC = facultative plant; FACU = facultative upland plant; UPL = obligate upland plant. A NI (no indicator) was recorded for those species for which insufficient information was available to determine an indicator status or that were not considered by the Regional Panel. An asterisk (\*) following a regional indicator identifies tentative assignments based on limited information or conflicting review. A positive sign (+) indicates a frequency toward the higher end of the category (more frequently found in wetlands). A negative sign (-) indicates a frequency toward the lower end of the category (less frequently found in wetlands).

<sup>4</sup> Categories are taken from *The Florida Wetlands Delineation Manual* (Gilbert et al., 1999). Acronyms are the following OBL = obligate wetland plant; FACW = facultative wetland plant; FAC = facultative plant; U = obligate upland plant.
