Progress Energy Public Involvement Process

Progress Energy Public Involvement Process

In June of 2007, Progress Energy (PEF) initiated a proactive process to inform the public and obtain public input on the planning for the electric transmission facilities associated with the proposed nuclear plant in Levy County. PEF created the Community Partnership for Energy Planning (CPEP) which is a partnership between PEF and a broad range of stakeholders designed to include all interests within the communities that may be impacted by new transmission facilities. Stakeholders involved in the process include local government, regional planners, land and property owners, environmentalists, agencies for environmental resource agencies, and business owners among others.

Initial Communications and Public Involvement - Early in the planning process, PEF began a broad communication effort to inform the public about the potential for significant new transmission lines within the state, as well as how they could get involved and provide input. Initially, PEF representatives informed respective government officials and staff of the identified counties of its planning process and communication plans. PEF also hired firms that specialize in meeting design and facilitation and have experience in electric utility issues. They assisted PEF in the design and implementation of its comprehensive public involvement process. The Utility Search Conference process, designed to allow an open dialogue between various stakeholders and public interest groups, was utilized as part of the community involvement process.

Leadership Teams of key community leaders were formed between July and September of 2007 in three regions representing Hillsborough, Pasco, Pinellas, Polk, Citrus, Hernando, Levy, Lake, Marion and Sumter Counties. These teams assisted PEF in designing and conducting public involvement activities in the three regions. This public involvement activity included two-day Utility Search Conferences that were conducted between September and November in each of the three regions. The leadership teams began a nomination process that identified approximately 80 to 100 potential participants for the two-day conferences. The leadership team selected the final participants for the conferences based on the nominations from the community.

Background Report – Members of the Leadership Team volunteered to participate on a Background Report Committee to oversee the development of a report that would provide objective information about the energy challenges facing Florida. The report was assembled

and has been provided to the participants of the CPEP as well as other community stakeholders and the media. It was also provided to all participants of the Utility Search Conferences in advance of the two-day meetings.

Utility Search Conferences - The conferences included approximately 40 participants during each session. The participants represented eight stakeholder groups including government, business, civic, environmental groups, agencies, utilities and various public interest groups. The participants in the conferences spent two days considering local community issues and the future of electric energy supply in the region. The meetings were open to the public. Public involvement activities involving local media outlets were conducted prior to the Utility Search Conferences.

PEF received recommendations from the participants at the Utility Search Conferences. These recommendations included specific, detailed input on the corridor options PEF was considering, their priorities for siting transmission (i.e. co-location, minimizing environmental impact, etc.) and other recommendations related to future energy planning. Below is the feedback given by each Utility Search Conference on their priorities for transmission line siting.

**Community Criteria for Transmission Infrastructure Siting
(Group A - Hillsborough, Pasco, Pinellas & Polk Counties)**

1. Co-location with other present and future parallel infrastructure
2. Costs: Life Cycle Cost (LCC), alternatives, land availability, distance, who pays?
3. Compatibility with existing and future growth plans and visions (hard and green infrastructure)
4. Coordinate planning, regulatory agency and public participation
5. Avoid environmentally sensitive areas
6. Safety
7. Meet customer demand
8. Easily approved

**Community Criteria for Transmission Infrastructure Siting
(Group B - Citrus, Hernando & Levy Counties)**

1. Co-location (existing transportation, utility easements) – create a “Super Corridor” of utility infrastructure
2. Minimize impacts on environmentally sensitive areas and on communities
3. Utilize best technology and underground where feasible

**Community Criteria for Transmission Infrastructure Siting
(Group C - Lake, Marion & Sumter Counties)**

1. Environmental impact
2. Public and political acceptance (including aesthetics, land use)
3. Constructability
4. Aesthetics
5. Co-location, maximize use of already impacted area
6. Safety – to local community, reliability
7. Cost of improvements
8. The participants felt that PEF should include following additional criteria - Respect for agricultural land/maintaining rural character

Community Working Groups - Subsequent to the Utility Search Conferences, Community Working Groups (CWGs) have been formed in all three regions. These CWGs consist of approximately 25 community representatives many who participated in the Search Conferences. These CWGs are working with PEF to refine the various recommendations from the Utility Search Conferences and plan additional and broad community outreach.

Open Houses - With the guidance of the CWGs, thirteen open houses were planned and conducted during February and March 2008, in all ten counties potentially impacted by the new transmission lines. These open houses were sponsored by the Community Partnership for Energy Planning and PEF. Corridor information evaluated at the Utility Search Conferences was made available at the open houses for review by the broader public. All property owners within these mile wide corridors study areas were invited to the open houses. In addition, government officials, regional planners, homeowners associations, agencies, media and other interested parties identified by the CWGs were invited to these forums. PEF provided approximately 40 subject matter experts at each open house to address community issues and concerns such as siting and acquisition of rights-of-way, construction, EMFs, regulation, community involvement, environmental issues, property values and other key issues.

13 Open Houses Conducted in February and March 2008

- **More than 107,000 letters to property owners**
- **Letters to all local governments identified along corridor study areas**
- **Letters to regional planning organizations, agencies and civic associations**
- **Advertisements ran in all local media outlets**
- **All members of the Community Partnership for Energy Planning were included – Leadership Teams, Utility Search Conference participants, Community Working Groups**

PEF documented public input on the corridor study areas at the open houses via questionnaires. All attendees were encouraged to complete a questionnaire and approximately 60 percent of attendees did so. As a portion of the questionnaire, participants were asked to rank the 12 criteria used to site transmission line corridors.

Open House Questionnaire Results

Questionnaire results from each open house were tabulated by the frequency of the ranks assigned to each criterion. In turn, the percentage of responses assigned to each rank was calculated. To determine the overall ranking for each criterion, a weighted percentage was also calculated. The table below illustrates the criteria which the participants ranked the most important in selecting the location of the proposed transmission line corridor.

All three open house groups surveyed identified the most important factors to consider when selecting the location of a proposed transmission line are: minimize the number of residences in the corridor; the maximum length should be located through an existing transmission line right-of-way (ROW), and the transmission line should be co-located along another linear facility.

OPEN HOUSES – CRITERIA RANKING			
SURVEY CRITERIA	RANKING OF IMPORTANCE		
	Group A	Group B	Group C
Minimum residences in corridor	1	1	1
Maximum length thru existing ROW	2	2	2
Maximum co-locate along other linear facility	3	3	3
Minimum schools in corridor	4	5	6
Minimum number or parcels crossed	5	4	5
Minimum length thru conservation lands	6	6	4
Minimum length thru cultural resources	7	7	8
Minimum length of forested wetlands	8	12	7
Minimum number of protected species	9	8	10
Minimum length of herbaceous wetlands	10	9	9
Minimum number of eagle nests	11	11	12
Minimum cost of construction	12	10	11

Other Outreach Activities - In addition to the open houses, PEF is conducting public meetings with local governments, homeowners associations and special interest groups within the ten counties. Information received from these efforts is being incorporated into the transmission corridor planning process.

PUBLIC FACILITY	6
EDUCATION	6
PLANNED DEVELOPMENT	6
RURAL CLUSTER OVERLAY	7

MAPPING CRITERIA AND BASIC STANDARDS FOR FUTURE LAND USE MAP CATEGORIES

CONSERVATION

- Mapping Criteria. This classification includes state forests, wetlands, riverine protection zones, privately owned isolated uplands in the Coastal Zone and publicly and quasi-publicly owned properties which have been designated for conservation.
- Purpose. To retain forests, protect wetlands and retain areas of wildlife and marine habitat.
- Land Uses Allowed. Timbering (with a management plan), limited resource-oriented recreational activities and up to one residential unit per forty acres, or as otherwise consistent with the quarter-quarter land management concept.

Additional Clarification

1. Wetlands are mapped from available Soil Conservation Service hydric soils mapping. Due to the mapping scale, small areas of wetlands or isolated uplands (generally less than 20 acres) may not be shown on the Future Land Use Map.
2. Exact determination of wetlands shall be the wetland jurisdictional limits of the applicable environmental agencies (DEP, SWFWMD, COE), with the wetland area being treated as "conservation" in the land use approval process.
3. Any jurisdictional wetlands approved for dredge and fill by the appropriate environmental agency shall no longer be considered as wetlands for the purpose of County land use approvals.
4. Within the Coastal Zone, any unmapped uplands within the conservation designation which have direct access to the County roadway network shall be considered to have a residential designation, which potentially allows all of the land uses specified therein.
5. Any non-hydric areas on privately owned parcels, designated Conservation, within non Coastal Zone State or Federal lands shall be considered as having a Rural designation.

RURAL

- Mapping Criteria. This classification includes portions of the County generally in the following circumstances:

1. Areas outside the anticipated residential growth patterns without urban service facilities.
 2. Areas in some level of agricultural use but expected to exhibit development pressures of a rural nature during the planning period.
 3. Properties with physical limitations (flood plains, sinkholes, etc.) and properties transitional to major conservation areas in the Coastal Zone.
- Purpose. The continuation of agricultural pursuits and the retention of the rural nature of a significant portion of the County and to limit residential density outside of recognized growth or public infrastructure corridors.
 - Land Uses Allowed. Agriculture, agricultural commercial, recreation, and residential development with densities no greater than 1 unit per 10 acres, except in designated pre-existing rural communities. Land uses which can be located in this classification with performance standards being met include neighborhood commercial, schools, minor public facilities and residential uses as established in the Residential Land Use Category where it lies within 1,320 feet of a residential classification.

Additional Clarification

1. This designation recognizes the need for the coexistence of agricultural activities with emerging low density residential uses in specific areas of the County.
2. Appropriate buffers shall be established between high intensity agricultural uses and low density residential areas to protect the use and enjoyment of land by each separate user.

RESIDENTIAL

- Mapping Criteria. This classification covers existing and perceived growth corridors, where physical development limitations are few, access is good and infrastructure is being provided or is planned in the County's long-range facility plans. The residential classification has been shown in those corridors except where more specific utilization such as commercial, industrial, education, etc., has been designated.
- Purpose. To channel intensive residential growth to those portions of the County which are not designated for protection or utilization of natural resources (i.e. mineral resources,

floodplain, agriculture, wetlands, wildlife habitat) and are within the County's proposed plans for infrastructure expansion.

- Land Use Allowed. Single family residential densities up to 5.4 units/acre, resort residential and ancillary land uses such as recreation, churches, and community centers. Land uses which can be located in this category with performance standards being met include multi-family housing up to 16 dwelling units per acre, rural residential, neighborhood commercial, commercial extending from commercial nodes with functioning frontage road, unless it is determined that wetlands or existing development make frontage road extension unfeasible, offices and professional, schools, hospitals and minor public facilities.

Additional Clarification

1. Rural land use densities and uses will be allowed in this classification without a comprehensive plan amendment. Greater restrictions, may be placed on any agricultural activities or animal maintenance than in the rural land use areas.
2. The general performance standards required for the location of neighborhood commercial are established in Goal 1.01, Objective M. More specific standards may be delineated in the land use regulations.

COMMERCIAL

- Mapping Criteria. The mapped portions of this classification consist of major existing commercial corridors along U.S. 19 and S.R. 50. Commercial nodes (existing and projected) at intersections of arterial and/or collector roads. Commercial areas which are not mapped but are driven by policies and performance standards include neighborhood commercial, commercial approved as part of or proximate to major mixed-use developments, planned development districts, specialty commercial, infill areas and commercial extending from nodes with functioning frontage roads.
- Purpose. To provide locations for the provision of commercial services along major roads in residential growth corridors.
- Land Use Allowed. Commercial activity with a maximum Floor Area Ratio of .35 for office professional and a Floor Area Ratio of .3 for retail. Other land uses such as recreation, offices, minor public facilities and minor institutional are allowed. Residential units may be allowed (See Policy 1.01L(1)).

MINING

- Mapping Criteria. This classification consists of the area north of S.R. 50 within the outer boundaries of mining zoned properties existing as of June 7, 1989, and lands which receive comprehensive plan amendment approval to the mining land use category after June 7, 1989. The maximum Floor Area Ratio shall be .1.
- Purpose. To allow for the extraction of mineral resources where impact on major residential areas will be minimal.
- Land Use Allowed. Mining and ancillary mining activities, and agriculture.

Additional Clarifications

- The land designated as mining through the approval of comprehensive plan amendment 93-1, is restricted to the excavation of hard rock limerock, soft rock limerock, sand mining and other activities or operations ancillary to the excavation of the hard and soft limerock and sand. Further, no blasting, drilling, or extraction shall occur within 3,000' of Brookridge.
- CPAM-93-1 shall meet the following stricter standards for environmental protection and buffering:

Standard 1: An Environmental Assessment shall be conducted and evaluated as part of the mining permit process, which will include a mapping of environmentally sensitive lands.

Standard 2: Resource extraction shall not be allowed in “environmentally sensitive” areas which cannot be restored. “Environmentally sensitive” is defined to include wetlands, rivers, streams, lakes, springs, coastal floodplains, habitat of threatened and endangered species and species of special concern county-mapped prime groundwater recharge areas, listed historically significant sites, and prime agricultural soils historically in use as cropland. “Restoration” is defined as restoring the type, nature, and function of the ecosystem in existence prior to mining.

Standard 3: There shall be a 100 foot buffer between resource extraction and rivers, streams, lakes, springs, or wetlands that are not mined.

Standard 4: Blasting shall not occur within 500 feet of a protected structure. Protected Structures are any dwelling, public building, school, church, cemetery, or

commercial or institutional building on lands not controlled by the operator of the mine.

- In addition to the above, this property shall also be subject to the standards of the Hernando County Mining Ordinance.
- In consideration for the right to mine soft rock limerock in the area of CPAM 93-1, reclamation shall be performed in all areas which were previously mined, but are not subject to the reclamation requirements. This will be in addition to reclaiming the areas of CPAM 93-1. All reclamation will meet the requirements of the Mining Ordinance.”

RECREATION

- Mapping Criteria. This classification consists of those areas, public or private, which are designated for community (not neighborhood) recreation purposes.
- Purpose. To provide sufficient lands for the recreation needs of residents and visitors, in locations containing natural features (resource oriented) or convenient to residents (user-oriented).
- Land Uses Allowed. Private or public recreation uses, including recreational lodgings, ancillary commercial activity and housing for security purposes.

INDUSTRIAL

- Mapping Criteria. This classification consists of existing industrial zoned properties and areas proposed for industrial use due to their proximity to major transportation network (airport, expressway interchange, railroad, truck bypass, U.S. highways). The maximum Floor Area Ratio shall be .5.
- Purpose. To provide for a clustering of industrial activity at locations in high tenant demand and with sufficient infrastructure, which do not significantly impact surrounding land uses.
- Land Uses Allowed. Industrial uses, ancillary commercial activities, minor public facilities, and ancillary residential.

PUBLIC FACILITY

- Mapping Criteria. This classification includes but is not limited to the following existing and proposed major public facilities: wellfields, sewage treatment plants, solid waste disposal sites, towers, power transmission lines, and power plants.
- Purpose. To identify areas within the County where major public facilities are to be located.
- Land Uses Allowed. The public facilities listed under mapping criteria and limited recreation and agricultural uses by special designation where compatible with adjacent land uses. The County recognizes that sand mining activities will be allowed to continue on the public facility lands designated in Sections 10 and 15 of Township 21 South, Range 18 East.

EDUCATION

- Mapping Criteria. This classification includes existing and proposed school sites as identified by the Hernando County School Board. The intensity of uses shall not exceed 60 students per acre.
- Purpose. To identify areas within the County where schools are to be located.
- Land Uses Allowed. Schools and ancillary activities such as recreation facilities, offices and housing for security purposes.

PLANNED DEVELOPMENT

- Mapping Criteria. This classification is being utilized for four specific areas within the County where a mixture of land uses is envisioned, but the locations of each land use will have to be determined in a master planning process. One site consists of major tracts of land at the SR 50 interchange with I-75. The second site is the Hernando County Airport and surrounding designated lands. The third site is the World Woods Golf Resort and related conservation areas. The fourth site is the Hickory Hill development.
- Purpose. To allow for a mix of land uses in locations where master planning and public/private coordination is particularly important.
- Land Uses Allowed.
In the I-75/SR 50 Planned Development District the proposed mix of land uses include industrial, commercial residential and public facility with more description and policies being provided under Goal 1.07, Objective B.

In the Airport Planned Development District, the proposed mix of land uses include aviation, aviation related activities, industrial uses, public facility, commercial, limited agriculture, limited rural development, and interim continuation of vested residential development, and other uses not incompatible with the airport. More description and policies are provided under Goal 1.07, Objective C.

In the World Woods Planned Development District, the proposed mix of land uses include: Golf Courses, Clubhouse, Resort Residential Dwellings, Condominiums, Resort Hotel and Ancillary Facilities (including but not limited to restaurant, pro shop, tennis club, parking, interim sewage treatment plant, etc.) with more description and policies being provided under Goal 1.07, Objective D.

In the Hickory Hill Planned Development District, the proposed mix of land uses include single family residential, golf courses and ancillary facilities, neighborhood commercial, open space, and recreational amenities, such as clubhouses, tennis facilities, aquatic and fitness centers, equestrian facilities, trails and parks, with more description and policies being provided under Goal 1.07, Objective E.

RURAL CLUSTER OVERLAY

- Mapping Criteria – This designation is applied as an overlay within the Rural land use areas of the County and provides for increased development density for sites that meet selected criteria. Density credit is based on a sliding scale that includes, but is not limited to, such factors as development clustering, open space preservation, habitat protection, greenways connectivity, etc. The overlay designation affords greater opportunity for open space provision on developing lands within the rural areas of the County.
- Purpose – To provide for increased habitat and open space preservation on Rural designated properties through increased density clustering on the remaining developable portions of the site.
- Land Uses Allowed –

184 Stardust (CPAM-06-04) - This overlay provides for the development of up to 0.425 dwelling units per acre clustered on a maximum of 92 acres of a 184 acre site, and includes the following criteria:

- A minimum of 50% of the naturally forested northern 80-acre parcel will be maintained in permanent preservation/conservation and be configured to provide a

contiguous wildlife corridor between the existing conservation lands to the west, north, and east; a portion of the residential lots adjacent to the preservation tract on the parcel or adjacent to other publically held lands may be included in the 50% calculation, provided that a conservation easement is established on the portion of the lot to be preserved. Any lands preserved on individual residential lots will not count toward the minimum 50% preservation area requirement for the overlay parcel.

- two access points will be provided to serve the parcel;
- there shall be a “rural vista” corridor along CR 491 and Parsons Road that is located within the 50 % preservation area requirement for the overlay parcel.

INTRODUCTION

Janus Research conducted a detailed desktop analysis for six corridors of the Progress Energy Florida Central Florida Corridor Study (PEFCFCS) from March 2008 through May 2008. These corridors include the ‘230 kV Brookridge Substation – Brooksville West Substation Transmission Line’ (BBW), the ‘230 kV Crystal River Energy Complex – Brookridge Substation Transmission Line’ (CB), the ‘230 kV Proposed Citrus Substation – Crystal River East Substation (2 Transmission Line Circuits)’ (CCRE), the ‘69 kV South Levy Nuclear Plant Construction/Administration Transmission Line’ (IO), the ‘69 kV North Levy Nuclear Plant Construction/Administration Transmission Line’ (IS), and the ‘230 kV Polk-Hillsborough-Pinellas (PHP) Transmission Line (Kathleen Substation – Lake Tarpon Substation)’.

The purpose of this desktop analysis was to identify any previously recorded cultural resources and areas with potential for containing unrecorded cultural resources within these corridors. Previously recorded archaeological sites and historic resources as well as areas with the potential for containing unrecorded resources were identified.

The Principal Investigator, Kathleen S. Hoffman, Ph.D., meets the *Secretary of the Interior’s Professional Qualification Standards* (48 FR 44716).

Location of Corridors

A breakdown of corridor locations is included in Table 1. The corridors are located on the Brooksville (1954 PR 1988), Chassahowitzka (1966 PR 1980), Citrus Park (1956 PR 1969), Crystal River (1954 PR 1988), Homosassa (1954 PR 1988), Oldsmar (1974), Plant City East (1975 PR 1987, minor revision 1993), Plant City West (1975, minor revision 1993), Red Level (1954 PR 1988 with minor revisions in 1992), Socrum (1975), Sulphur Springs (1956 PR 1987), Thonotosassa (1974 PR 1987), Weekiwachee Springs (1954 PR 1988), Yankeetown (1955 PR 1988), and Yankeetown SE (1954) USGS Quadrangle maps. Geographic Information System (GIS) data regarding more detailed location information for these corridors can be provided by Golder Associates.

Table 1. Location of Corridors

METHODS

For the purposes of this desktop analysis, Janus Research defined separate areas of potential effects (APE) keyed to the different types of cultural resources. For archaeological sites, historic structures, and historic cemeteries, resources were noted if they fell within or adjacent to (within a buffer of 100 ft.) the corridors as effects to these resources are usually limited to areas of ground disturbance. Historic bridges and resource groups were noted if they fell within the corridors or within a distance of 1000 ft. to account for direct disturbance, as well as potential indirect effects such as visual effects.

Background research methods included a search of the Florida Master Site File (FMSF) to identify cultural resources that are listed, eligible, or potentially eligible for the National Register of Historic Places (NRHP) and resources with potential or confirmed human remains. The FMSF serves as an archive and repository of information about Florida's recorded cultural resources. It represents an inventory of resources for which available information exists and describes their condition at a particular point of time. Because the inventory of resources is not all-inclusive on a statewide basis, gaps in data may exist. The FMSF is only as accurate and as comprehensive as the information that is submitted and users should be cognizant of the sometimes uneven quality of the information. The FMSF is an important planning tool that assists in identifying potential cultural resources issues and resources that may warrant further investigation and protection. It can be used as guide but should not be used to determine the Florida Division of Historical Resources'/State Historic Preservation Office's (FDHR/SHPO) official position about the significance of a resource.

USGS Quadrangle maps were also reviewed in order to identify potentially historic resources within the vicinity of the corridors. Additionally, a search for pertinent Certified Local Governments (CLG) located within the boundaries of the corridors was also conducted as CLGs often provide information regarding local resources which may not be included in the FMSF. Furthermore, National Park Service (NPS), Bureau of Indian Affairs (BIA), and United States Congressional documents were reviewed in order to determine the federally and state recognized tribes within Florida and determine if corridors traversed reservation land, land associated with state recognized tribes, or lands once considered to be tribally affiliated.

RESULTS

Previously Conducted Cultural Resource Surveys

The FMSF notes 61 previously conducted cultural resource surveys within the corridors. One previous survey (9193) intersected the BBW Corridor. Four previous surveys (2785, 4387, 8377, and 12807) intersected the BBW and CB corridors. One previous survey (4386) intersected the BBW, CB, CCRE, IS, and PHP corridors. Five previous surveys (104, 4590, 4732, 7108, and 7573) intersected the CB and CCRE corridors. One previous survey (8897) intersected only the IO corridor. Nine previous surveys (1466, 4914, 5012, 6375, 6547, 11562, 12402, 12713, and 13448) intersected only the CB Corridor. The remaining 40 previous surveys solely intersected the PHP Corridor.

Please note that some of these surveys occur within multiple corridors. While a total of 61 cultural resource surveys have been previously conducted within the corridors, large portions of the corridors have never been surveyed for cultural resources. These surveys were conducted between 1974 and 2006. The scopes of work vary and particularly, the early surveys may not meet current legal requirements or professional standards. It is likely that the FDHR/SHPO will require a cultural resource assessment survey (CRAS) of the final route within the corridors that meets the requirements of Chapter 1A-46 (Archaeological and Historical Report Standards and Guidelines), Florida Administrative Code. Once a final route is selected, continued coordination with FDHR/SHPO is recommended to determine the appropriate scope of work. The FMSF survey number, survey title, author, and publication date for each of the 61 surveys is included in Table 2.

Table 2. Previously Conducted Cultural Resource Surveys within the Corridors

Survey #	Survey Name, Author(s), and Date
99	A Cultural Resource Survey of the Northdale / North Lakes Subdivision, Hillsborough County, Florida (Grange and Williams 1978)
104	Archaeological-Historical Survey of Lake Rousseau to Crystal River Power Plant Water Supply Pipeline and Transmission Corridor Access Road, Citrus County, Florida (Willis 1978)
108	An Archaeological and Historical Survey of Seven Proposed Recreation Resource Sites in the Lower Hillsborough River Flood Detention Area [Hillsborough County, Florida] (FDHR 1979)
139	An Archaeological and Historical Survey of the Lake Thonotosassa By-Pass Canal Right-of-Way [Hillsborough County, Florida] (Deming and Williams 1976)
272	A Phase 2 Archaeological Assessment Survey of the Deltona Corporation's Tampa Palms Development in Northeastern Hillsborough County (Rom 1979)

13824	Cultural Resource Assessment Survey, Project Development & Environment Study, East-West Road from I-275 to West of Commerce Park Boulevard, City of Tampa and Hillsborough County [Florida] (Janus Research 2006)
14392	Final Cultural Resource Assessment Survey Report, Veterans Expressway (SR589) Project Development and Environment (PD&E) Study from Memorial Highway to Van Dyke Road, Hillsborough County, Florida (ACI 2005)

During 1990 and 1991 the “Preliminary Cultural Resource Assessment of the Florida Power Corporation's Lake Tarpon to Kathleen 500kV Transmission Line,” (Piper Archaeological Research 1990) and the “Cultural Resource Assessment Survey of the Florida Power Corporation's Lake Tarpon-Kathleen 500 kV Transmission Corridor, Pinellas, Hillsborough, Pasco, and Polk Counties, Florida,” (Piper Archaeological Research 1991b) were conducted. Portions of the PHP Corridor between the western-most point of the corridor and Section 20 of Township 27 South, Range 17 East, are located within the areas included in these previous surveys. The “Phase I Cultural Resources Investigation of the Proposed 22-inch-diameter St. Petersburg Lateral Loop of the Florida Gas Transmission Company Phase III Expansion Pipeline Corridor” (R. Christopher Goodwin & Associates 1993) was also conducted within the eastern portion of the Kathleen to Lake Tarpon Preferred Corridor. As the project

progresses, these surveys should be further examined to determine appropriate levels of re-evaluation and to evaluate their use in the development of survey strategy.

Previously Recorded Cultural Resources

Previously Recorded Archaeological Sites

Coordination was conducted with the FDHR/SHPO to identify previously recorded archaeological sites and historic resources and to determine the potential for unrecorded resources within the BBW, CB, CCRE, IO, IS, and PHP corridors. This coordination included a detailed search of the FMSF, which is the official inventory of previously documented archaeological sites and historic resources, and a guide to NRHP-listed and eligible resources in the state. This search included an analysis of the most current GIS data, which includes both a spatial and tabular representation of previously recorded cultural resources within the state.

The FMSF search identified 45 previously recorded archaeological sites within or adjacent to (within 100 ft. of) the corridors. Two previously recorded archaeological sites (8HE352 and 8HE353) are located within the common area of the BBW and CB corridors. Eight previously recorded archaeological sites (8HE354 and 8HE357-8HE363) are located within the remaining area of the BBW Corridor. Eight previously recorded archaeological sites (8CI789, 8CI790, 8CI800, 8CI1028, 8CI1037, 8CI1039, 8HE564, and 8HE565) are located within the remaining area of the CB Corridor. One archaeological site (8CI1005) falls within the CCRE Corridor and three archaeological sites (8LV600-602) fall within the IO corridor. The remaining 23 of these 45 archaeological sites (8HI43, 8HI380, 8HI381, 8HI428, 8HI495, 8HI496, 8HI539, 8HI4056-8HI4065, 8HI4079, 8HI6771, 8HI6772, 8HI7842, 8HI9672, and 8HI9673) fall within the PHP Corridor.

All 45 previously recorded archaeological resources are described in Table 3. The locations of the NRHP-eligible and potential NRHP-eligible archaeological sites, sites with potential human remains, and sites with possible Paleoindian components are illustrated on USGS Quadrangle maps in Attachment A.

Table 3. Previously Recorded Archaeological Sites within/adjacent to the Corridors

FMSF #	Site Name	Property Type / Resource Type	NRHP Evaluation ¹
8CI789	No Name	Archaeological Site / Low Density Nineteenth Century-American Artifact Scatter	Ineligible
8CI790	No Name	Archaeological Site / Low Density Pre-Columbian Lithic and Ceramic Scatter	Ineligible
8CI800	27-1	Archaeological Site / Nineteenth to Twentieth Century-American Glass (Isolated Find)	Ineligible

FMSF #	Site Name	Property Type / Resource Type	NRHP Evaluation ¹
8CI1005	Dixon	Archaeological Site / Nineteenth to Twentieth Century-American Homestead, Well, and Low Density Artifact Scatter	Ineligible
8CI1028	Toll Plaza	Archaeological Site / Pre-Columbian Lithic (Isolated Find)	Ineligible
8CI1037	Shamrock Acres	Archaeological Site / Variable Density Pre-Columbian Lithic and Ceramic Scatter	Ineligible
8CI1039	Emerald Oaks	Archaeological Site / Pre-Columbian Lithic (Isolated Find)	Ineligible
8HE352	No Name	Archaeological Site / Twentieth Century-American Turpentine Sherds (Isolated Find)	Ineligible
8HE353	No Name	Archaeological Site / Pre-Columbian Lithic (Isolated Find)	Ineligible
8HE354	No Name	Archaeological Site / Twentieth Century-American Turpentine Sherd (Isolated Find)	Ineligible
8HE357	42-1	Archaeological Site / Twentieth Century-American Low Density Turpentine Sherd Scatter	Ineligible
8HE358	42-2	Archaeological Site / Nineteenth to Twentieth Century-American Turn Mold / Paste Mold Glass Sherd (Isolated Find)	Ineligible
8HE359	42-3	Archaeological Site / Pre-Columbian Lithics (Isolated Find)	Ineligible
8HE360	42-4	Archaeological Site / Twentieth Century-American Turpentine Sherd (Isolated Find)	Ineligible
8HE361	42-5	Archaeological Site / Historic Glass Sherd (Isolated Find)	Ineligible
8HE362	42-6	Archaeological Site / Twentieth Century-American Turpentine Sherds (Isolated Find)	Ineligible
8HE363	42-7	Archaeological Site / Low Density Twentieth Century-American Turpentine Sherd Scatter	Ineligible
8HE564	Squirrel Away	Archaeological Site / Twentieth Century-American Herty Cup Sherds; Pre-Columbian Campsite	Ineligible
8HE565	Obscure	Archaeological Site / Pre-Columbian Campsite	Ineligible

FMSF #	Site Name	Property Type / Resource Type	NRHP Evaluation ¹
8HI43	Flint Creek (also known as James Harris, 301 Site, and K-11)	Archaeological Site / Multi-component Pre-Columbian Extractive Site and Artifact Scatter; Twentieth Century-American Building Materials	Ineligible
8HI380	Trout Creek Road	Archaeological Site / Archaic and Possible Paleoindian Lithic Scatter	Insufficient Information
8HI381	Fish Pond	Archaeological Site / Multi-component Paleoindian, Archaic, and Transitional Campsite	Eligible
8HI428	Crawford	Archaeological Site / Pre-Columbian Lithic Scatter	No Evaluation
8HI495	Cow House East Head	Archaeological Site / Pre-Columbian Burial Mounds	No Evaluation
8HI496	Cow House West Head	Archaeological Site / Pre-Columbian Lithic Scatter	No Evaluation
8HI539	Dam	Archaeological Site / Archaic and Possible Paleoindian Lithic Scatter	Insufficient Information
8HI4056	Double Branch	Archaeological Site / Dense Pre-Columbian Artifact Scatter	Potentially-Eligible
8HI4057	Tower 21	Archaeological Site / Variable Density Pre-Columbian Artifact Scatter	Ineligible
8HI4058	Hixon Lake	Archaeological Site / Pre-Columbian Pottery (Isolated Find)	Ineligible
8HI4059	Fairy Lake	Archaeological Site / Variable Density Pre-Columbian Artifact Scatter	Ineligible
8HI4060	TECO	Archaeological Site / Pre-Columbian Lithic Scatter	Ineligible
8HI4061	Dale Mabry	Archaeological Site / Low Density Pre-Columbian Artifact Scatter	Ineligible
8HI4062	Saddleback Lake	Archaeological Site / Pre-Columbian Lithic Scatter	Ineligible
8HI4063	Simmons Road	Archaeological Site / Variable Density Pre-Columbian Artifact Scatter	Ineligible
8HI4064	Lake Leonides	Archaeological Site / Dense Pre-Columbian Artifact Scatter	Ineligible
8HI4065	Tower 76	Archaeological Site / Dense Pre-Columbian Artifact Scatter	Ineligible
8HI4079	Tower 80	Archaeological Site / Dense Pre-Columbian Artifact Scatter	Ineligible
8HI6771	H2-02	Archaeological Site / Pre-Columbian Non-Quarry Lithic Scatter	Ineligible
8HI6772	H8-01	Archaeological Site / Pre-Columbian Habitation and Low Density Twentieth Century-American Artifact Scatter	Ineligible

FMSF #	Site Name	Property Type / Resource Type	NRHP Evaluation ¹
8HI7842	East-West 4	Archaeological Site / Pre-Columbian Lithic Scatter	Ineligible
8HI9672	Grass Not Hay	Archaeological Site / Pre-Columbian Campsite	Ineligible
8HI9673	Carlton Grove Pasture	Archaeological Site / Pre-Columbian Campsite	Ineligible
8LV600	Gulf Hammock Southeast Drainage Site	Archaeological Site / Dense St. Johns II (AD 800-1500) Ceramic and Lithic Scatter	Ineligible
8LV601	Melissa Band Site	Archaeological Site / Pre-Columbian Lithic Scatter	Ineligible
8LV602	Dan's Drive Site	Archaeological Site / Dense Pre-Columbian Lithic Scatter	Ineligible

¹ As recorded in the FMSF; may require re-evaluation

One NRHP-eligible archaeological site (8HI381) and one potentially NRHP-eligible archaeological site (8HI4056) were identified in the FMSF within the PHP corridor. Site 8HI381, Fish Pond, is a pre-Columbian multi-component site with possible Paleoindian components. The site includes a prehistoric campsite, lithic scatter, and subsurface features. Site 8HI4056, Double Branch, consists of a dense scatter of pre-Columbian lithics and pottery. The locations of these sites within the PHP corridor are illustrated on USGS Quadrangle maps in Attachment A.

While these resources are not officially listed in the NRHP, they are afforded the same considerations as properties listed in the NRHP (as per 36 CFR 60.4 of the *National Historic Preservation Act of 1966*). Avoidance of these sites is recommended. If avoidance is not feasible, then appropriate minimization or mitigation measures will be developed in coordination with the FDHR/SHPO.

One resource with the potential for human remains (8HI495) was identified in the FMSF within the PHP Corridor. Site 8HI495, Cow House East Head, is a pre-Columbian burial mound site that has not been evaluated for NRHP-eligibility by the FDHR/SHPO.

Please note that any investigations regarding sites with potential, or confirmed, human remains are subject to the provisions of Chapter 872 of the Florida Statutes. Chapter 872 requires coordination with the State Archaeologist and federally recognized Native American tribes prior to any archaeological investigations. Furthermore, if human remains are encountered, further coordination must be conducted with the State Archaeologist and the federally recognized Native American tribes. Chapter 872 grants authority to the State Archaeologist in determining the disposition of the remains (i.e. whether to avoid or re-inter the remains). This coordination can be time consuming, costly, and controversial. Therefore, avoidance of known or potential burials is recommended.

Three archaeological sites (8HI380, 8HI381, and 8HI539) are noted as having possible Paleoindian (12,000 - 8,500 years ago) components. These sites are located within the PHP Corridor. Please note that sites with Paleoindian components may require re-evaluation and further testing as there are relatively few Paleoindian sites recorded within the State of Florida. The small number of these sites and their potential to yield information regarding the prehistory of Florida may warrant eligibility for listing in the NRHP.

Previously Recorded Historic Structures

Two previously recorded historic structures were identified in the FMSF within or adjacent to (within 100 ft. of) the corridors. Previously recorded structure 8CI340 is located within the common area of the CB and CCRE corridors and previously recorded structure 8HI1032 is located within the PHP Corridor. These structures are listed in Table 4.

Table 4. Previously Recorded Historic Structures within/adjacent to the Corridors

FMSF #	Property Type / Name / Address	NRHP Evaluation ¹
8CI340	Historic Structure / Red Level Baptist Church / West of US 19	Not Evaluated
8HI1032	Historic Structure / L.E. Mobley House / 1098 S. Mobley Road	Not Evaluated

¹ As recorded in the FMSF; may require re-evaluation

Previously Recorded Historic Cemeteries

No previously recorded historic cemeteries were identified within or adjacent to (within 100 ft. of) the corridors.

Previously Recorded Resource Groups

No previously recorded resource groups were identified within or adjacent to (within 100 ft. of) the corridors.

Previously Recorded Historic Bridges

No previously recorded historic bridges were identified within 1000 ft. of the corridors.

Previously Recorded Historic Districts

No previously recorded historic districts were identified within 1000 ft. of the corridors. A search for clusters of previously recorded historic structures (ten or more) indicative of a potential unrecorded historic district within 1000 ft. of the corridors identified no potential historic districts.

Potential Cultural Resources

Review of USGS Quadrangle Maps

A preliminary review of the USGS Quadrangle maps was completed in order to identify areas that may contain potential historic resources including districts, structures, cemeteries, and bridges.

Potential Historic Districts

This preliminary review of the USGS Quadrangle maps identified several concentrations of potential historic structures that may represent unrecorded potential historic districts. All of these potential areas fall within 1000 ft. of the PHP corridor.

There is the potential for a historic district on the Citrus Park (1956 PR 1969) USGS Quadrangle map in the northwest quarter of Section 31 of Township 27 South, Range 18 East, with 12 potential historic structures located adjacent to Halfmoon Lake. There is also the potential for a historic district on the Sulphur Springs (1956 PR 1987) USGS Quadrangle map in Sections 19 and 22-24 of Township 27 South, Range 18 East, with over 30 potential historic structures in the vicinity of the existing transmission line corridor. Another area with the potential for a historic district was identified on the Thonotosassa (1974 PR 1987) USGS Quadrangle map in the northwest quarter of Section 31 of Township 27 South, Range 20 East, with 11 potential historic structures in the vicinity of the existing transmission line corridor.

The northeast quarter of Section 5 of Township 28 South, Range 20 East on the Thonotosassa (1974 PR 1987) USGS Quadrangle map illustrates 10 potential historic structures located within 1000 ft. of the existing transmission line corridor along Morris Bridge Road. The potential for another historic district exists on the Thonotosassa (1974 PR 1987) USGS Quadrangle map in the southeast quarter of Section 4 of Township 28 South, Range 20 East, with over 50 potential historic structures located within the vicinity of the existing transmission line corridor in Thonotosassa near US 301.

The potential exists for a historic district on the Plant City East (1975 PR 1987, minor revision 1993) USGS Quadrangle map along Deeson Road near Kathleen where the corners of Sections 19, 20, 29, and 30 meet in Township 27 South, Range 23 East. There is the potential for a historic district on the Plant City West (1975, minor revision 1993) USGS Quadrangle map in the southwest quarter of Section 6 of Township 28 South, Range 21 East, with over 10 potential historic structures including the Thonotosassa Church.

Be advised that this information has not yet been verified through the County Property Appraisers. A cultural resource reconnaissance survey is recommended to identify any unrecorded historic districts within the corridors and to manage any NRHP concerns before final routes are established within the corridors.

Potential Historic Structures

Numerous potential historic structures were identified throughout the corridors on the USGS quadrangle maps. A potential historic structure, the Thonotosassa Church, was identified within 1000 ft. of the PHP corridor. This potential historic structure is located to the south of Knights Road on the Plant City West (1975, minor revision 1993) USGS Quadrangle map in the southwest quarter of Section 6 of Township 28 South, Range 21 East.

While not necessarily indicative of potential historic districts, several areas of higher concentrations of potential historic structures were identified during the preliminary review

of the USGS Quadrangles maps. Both the Plant City West (1975, minor revision 1993) USGS Quadrangle map and the Socrum (1975) USGS Quadrangle map suggest potential historic structures within 1000 ft. of the PHP corridor. These potential historic structures are located in the vicinity of Knights Road extending from Sections 2-6 of Township 28 South, Range 21 East, and the southeastern quarter of Section 17 of Township 28 South, Range 23 East, respectively.

Be advised that this information has not yet been verified through the County Property Appraisers. Again, a cultural resource reconnaissance survey is recommended to identify any unrecorded historic structures within the corridors, and to manage any NRHP concerns before final routes are established within the corridors.

Potential Historic Bridges and Historic Cemeteries

No historic bridges or historic cemeteries were identified during the preliminary review of the USGS quadrangle maps.

AGENCY COORDINATION

CLG Coordination

Hillsborough County is the only county in which the corridors are located that is included on the February 2008 list of CLG posted on the FDHR website (FDHR 2008). In accordance with Chapter 1A-46 (Archaeological and Historical Report Standards and Guidelines), Florida Administrative Code, coordination with the Hillsborough County Historic Preservation Planner will need to be conducted.

The February 2008 list of CLG does not include any additional counties in which the corridors are located (Citrus, Hernando, Levy, Pinellas, and Polk counties) and does not include any additional municipalities within one mile of the corridors.

However, counties through which the corridors travel may include county specific plans for managing historic resources. It is recommended that as this project progresses and routes are established within the corridors, that these guidelines should be reviewed and coordination should be conducted with the appropriate staff.

FDHR/SHPO Coordination

A teleconference was held between Janus Research employees and Ms. Laura Kammerer, FDHR/SHPO Bureau of Historic Preservation Compliance Review Supervisor / Deputy SHPO. The teleconference familiarized Ms. Kammerer with the details of the PEFCFCS project confirmed the level of work conducted for the preliminary corridor analysis report was appropriate as required by FDHR/SHPO, and established the need to conduct a CRAS prior to construction once routes within the corridor have been finalized. Coordination will be ongoing, and Ms. Kammerer requested a meeting to discuss the results of this preliminary corridor analysis report prior to any formal submittal. Typed meeting minutes from this teleconference have been included in Attachment B.

Additionally, a meeting with Laura Kammerer, FDHR / SHPO Bureau of Historic Preservation Compliance Review Supervisor / Deputy SHPO and April Westerman, FDHR/SHPO Bureau of Historic Preservation Compliance Review Historic Sites Specialist was held with Janus Research employees. FDHR recommended avoidance of known sites and requested that transmission line poles not be placed within the established boundaries of these sites. If this is not feasible, then further coordination will need to occur with FDHR regarding appropriate avoidance or minimization strategies. Typed meeting minutes have been included in Attachment B.

TRIBAL COORDINATION

The Native American Consultation Database (NACD) (NPS 2006), BIA GIS data (2002), NPS compiled tables of Native American land cessions (2008), and the United States Congressional Serial Set regarding Native American land cessions available through the Library of Congress American Memory Project (56th Congress, 1st Session 1899:704-705, 734-735) were reviewed in order to determine the federally and state recognized tribes within Florida. This was done to determine whether the corridors traverse reservation land, land associated with state recognized tribes, or lands once considered to be tribally affiliated.

The NACD (NPS 2006) identified five federally-recognized tribes affiliated with Florida. They include the Miccosukee Tribe of Indians of Florida, the Muscogee (Creek) Nation of Oklahoma, the Poarch Band of Creek Indians of Alabama, the Seminole Nation of Oklahoma, and the Seminole Tribe of Florida. Two of these tribes, the Miccosukee Tribe of Indians of Florida and the Seminole Tribe of Florida, are resident and have reservations in the State of Florida. None of the corridors cross reservation land. The locations of Tribal Reservations are defined by GIS data digitized by the BIA (2002) and were obtained through the Florida Geographic Data Library (FGDL). With the exception of the Seminole Reservation in Tampa (the Seminole Hard Rock Hotel and Casino) which is over 5.5 miles from the PHP Corridor, the resident tribes' reservation lands are located in the southern part of the state, and the corridors do not traverse the counties in which they are located.

This GIS data also depicts the location of land associated with one state recognized tribe, the Eastern Band of Creek Indians. Their land is located in the western panhandle of Florida, a distance of at least 100 miles from the corridors. Additionally, the FMSF listed no defined traditional cultural properties within the corridors.

However, the corridors are located within lands that at one time were considered to be tribally affiliated. The second part of a two part publication entitled *Eighteenth Annual Report of the Bureau of American Ethnology to the Secretary of the Smithsonian Institution, 1896-1897* was assembled by Charles C. Royce. This publication included an inventory of Native American land cessions and an accompanying 67 maps illustrating the described cession of land.

The NPS (2008) under the United States Department of Interior, created a collection of tables based on Royce's information which lists the map number, the Native American tribe named within the treaty, and the present-day tribes applicable for the land cession conducted between 1784 and 1894 by county. Additionally, through the Library of Congress' American Memory Project, the United States Congressional Serial Set (56th Congress, 1st Session 1899:704-705, 734-735) regarding the Indian Land Cessions (Attachment C) in the United States between 1784 and 1894 are available online with an accompanying map of the lands ceded within Florida (Attachment C).

Combining the pertinent pages and map available from the Library of Congress with the tables provided by the NPS, it was established that the corridors traverse land that was ceded from the 'Florida Tribes' (present day Miccosukee Tribe of Indians of Florida and Seminole Tribe of Florida) and the 'Seminole' (present day Seminole Tribe of Florida and Seminole Nation of Oklahoma) to the United States. The land ceded by the 'Florida Tribes' is designated on the map as number 118 and land ceded by the 'Seminole' is designated on the map as number 173 (Attachment C).

Tribal coordination will be initiated during the route selection process in order to identify concerns not readily available through the background research. The Tribal Historic Preservation Officer or (THPO) or Section 106 representatives for the appropriate federally-recognized Native American tribes culturally affiliated with Florida will be consulted throughout the route selection process and during any subsequent CRAS.

RECOMMENDATIONS

It is recommended that a comprehensive pre-screening analysis and reconnaissance level survey be conducted to assist in the selection of a final route within each corridor that will have minimum or no impact to significant cultural resources and to develop an appropriate work plan for conducting a CRAS that will meet the requirements of Section 106 of the National Historic Preservation Act; Chapter 267 F.S.; and Chapter 1A-46 (Archaeological and Historical Report Standards and Guidelines), Florida Administrative Code. It is also recommended that continued consultation with the FDHR/SHPO and the Native American Tribes be conducted regarding the results of this preliminary corridor analysis report and the cultural resource reconnaissance survey prior to the finalization of routes within the corridor.

Summary of Issues

- Once final routes are selected within the corridors, continued coordination with FDHR/SHPO is recommended to determine the appropriate scope of work.
- Tribal coordination is recommended throughout this project in order to identify and address any concerns prior to the selection of final routes within the corridors.
- One previously recorded archaeological site (8HI495) within the PHP Corridor is listed within the FMSF as potentially containing human remains. If human remains are encountered, further coordination must be conducted with the State Archaeologist and the Native American Tribes. This coordination can be time consuming, costly, and controversial. Therefore, avoidance of known or potential burials is recommended.
- Regarding sites with potential or confirmed human remains, Chapter 872 of the Florida Statutes requires coordination with the State Archaeologist and federally-recognized Native American tribes PRIOR to any archaeological investigations.
- Within the PHP Corridor, one previously recorded archaeological site (8HI381) was listed in the FMSF as having been determined eligible for listing in the NRHP by the FDHR/SHPO and one previously recorded archaeological site (8HI4056) was listed in the FMSF as having been determined potentially eligible for listing in the NRHP by the FDHR/SHPO. While these resources are not officially listed in the NRHP, they are afforded the same considerations as properties listed in the NRHP (as per 36 CFR 60.4 of the *National Historic Preservation Act of 1966*).
- Within the PHP Corridor, three archaeological sites (8HI380, 8HI381, and 8HI539) are noted in the FMSF as having possible Paleoindian components. These sites may require further testing as there are relatively few Paleoindian sites within the State of Florida. The small number of these sites and their potential to yield information regarding the prehistory of Florida may warrant eligibility for listing in the NRHP.

- FDHR/SHPO recommended avoidance of known sites and requested that transmission line poles not be placed within the established boundaries of these sites. If this is not feasible, then further coordination will need to occur with FDHR/SHPO regarding appropriate avoidance or minimization strategies.
- There is the potential for unrecorded historic structures and districts within the vicinity of the corridors. A cultural resource reconnaissance survey is recommended to identify any unrecorded resources and to manage any NRHP concerns before corridor routes are finalized.
- Hillsborough County is listed on the February 2008 list of CLGs posted on the FDHR website. As this project progresses and routes are established within the corridors, coordination with the Hillsborough County Historic Preservation Planner will need to be conducted in accordance with Chapter 1A-46 (Archaeological and Historical Report Standards and Guidelines), Florida Administrative Code.
- As this project progresses and routes are established, it is recommended that county-specific guidelines for historic and cultural resources be reviewed and that coordination be conducted with the appropriate staff.

FDHR/SHPO COORDINATION

TELECONFERENCE MINUTE REPORT
PROGRESS ENERGY FLORIDA CENTRAL FLORIDA CORRIDOR STUDY (PEFCFCS)

Person Called/Agency: Laura Kammerer, FDHR / SHPO Bureau of Historic Preservation
Compliance Review Supervisor / Deputy SHPO

Janus Staff: Kate Hoffman, Janus Research
Adam Schieffer, Janus Research

Date of Teleconference: January 29, 2008

Teleconference Summary:

1. Familiarized Ms. Kammerer with the PEFCFCS project due to the large area traversed by the project corridors.
2. Established that a complete cultural resource assessment survey (CRAS) would be needed for the final routes established within the corridors.
3. Confirmed or established the scope of work required by FDHR for both the preliminary corridor analysis and the final routes once selected.

Meeting Minutes: A summary of the PEFCFCS project and proposed application submittal dates were provided to Ms. Kammerer by Janus Research.

Ms. Kammerer confirmed that the detailed desktop review was an appropriate level of work of the preliminary corridor analysis, given the width of the corridors (up to one mile wide).

The need for a CRAS once final routes are finalized within the corridors was established.

Ms. Kammerer requested a meeting at least one week in advance of the Site Certification Application (SCA) submittal to discuss the findings of the preliminary corridor report.

Important Issues: The teleconference confirmed the level of work conducted for the preliminary corridor analysis and the need to conduct a CRAS once final routes within the corridors are established and prior to construction.

Follow-up:

1. Coordination will be ongoing
2. Ms. Kammerer requested a meeting at least one week prior to the SCA submittal to discuss pertinent cultural resource issue results.
3. A meeting will be held to establish appropriate scope of work once routes are established within the corridors.

MEETING MINUTE REPORT
PROGRESS ENERGY FLORIDA CENTRAL FLORIDA CORRIDOR STUDY (PEFCFCS)

Person /Agency: Laura Kammerer, FDHR / SHPO Bureau of Historic Preservation
Compliance Review Supervisor / Deputy SHPO
April Westerman, FDHR/SHPO Bureau of Historic
Preservation Compliance Review Historic Sites Specialist

Janus Staff: Kate Hoffman, Janus Research
Jim Pepe, Janus Research

Date of Meeting: April 29, 2008

Meeting Summary: Discussed SCA report reviewer comment regarding
recommendation to avoid sites versus avoid placing poles and
fill in previously undisturbed areas of sites. FDHR will
recommend avoidance and that transmission line poles not be
placed within the boundaries of sites. If this is not feasible,
then coordination will need to take place with FDHR
regarding appropriate avoidance or minimization
strategies.

Important Issues: N/A

Follow-up: N/A

ATTACHMENT C:

**SELECTED PAGES OF THE SCHEDULE OF INDIAN LAND CESSIONS
APPLICABLE TO CITRUS, HERNANDO, HILLSBOROUGH, LEVY, PINELLAS,
AND POLK COUNTIES WITH ACCOMPANYING MAP**

SCHEDULE OF INDIAN

Date	Where or how concluded	Reference	Tribe	Description of cession or reservation
1821 Aug. 29	Chicago, Illinois.	Stat. L., VII, 218.	Ottawa, Chippewa, and Potawatomi.	said tract, then such line shall be continued until it strikes the western boundary of the tract ceded to the U. S. by treaty of Detroit in 1807, and from the termination of the said line, following the boundaries of former cessions, to the main branch of the Grand river of Lake Michigan, should any of the said lines cross the said river, but if none of the said lines should cross the said river, then to a point due E. of the source of the said main branch of the said river, and from such point due W. to the source of the said principal branch, and from the crossing of the said river or from the source thereof, as the case may be, down the said river on the N. bank thereof to the mouth; thence following the shore of Lake Michigan to the S. bank of the said river St Joseph at the mouth thereof and thence with the said S. bank to the place of beginning. From the foregoing cession the said Indians reserve for their use the following tracts, viz: 1. One tract at Mang-ach-qua village, on the river Peble, of 6 miles square. 2. One tract at Mick-ke-saw-be of 6 miles square. 3. One tract at the village of Na-to-wa-se-pe of 4 miles square. 4. One tract at the village of Prairie Ronde of 3 miles square. 5. One tract at the village of Match-e-be-narh-she-wish, at the head of the Kekalamazoo river. The U. S. grants from above cession 26 sections of land to individuals of Indian descent.
1823 Mar. 3	Act of Congress.	Stat. L., III, 749.	Moravian or Christian Indians.	Congress, by the provisions of this act, appropriated \$1,000 with which to purchase and extinguish the Indian title to three tracts of land, containing 4,000 acres each, lying on Muskingum river, in Tuscarawas county, Ohio. These tracts were as follows: 1. One tract of 4,000 acres at Shoenbrun 2. One tract of 4,000 acres at Gnadenhutzen 3. One tract of 4,000 acres at Salem
Sept. 18	Camp on Moultrie creek in Florida territory.	Stat. L., VII, 224.	Florida tribes.	The Florida tribes cede to the U. S. all claim or title which they have to the whole territory of Florida, with the exception of such district of country as shall herein be allotted to them. The Florida tribes will hereafter be concentrated and confined to the following metes and boundaries: Commencing 5 miles N. of Okehumke, running in a direct line to a point 5 miles W. of Setarky's settlement, on the waters of the Amazura (or Withlahuchie river), leaving said settlement 2 miles S. of the line; from thence in a direct line to the S. end of the Big Hammock, to include Chickuchate; continuing in the same direction for 5 miles beyond the said Hammock, provided said point does not approach nearer than 15 miles the seacoast of the Gulf of Mexico; if it does the said line will terminate at that distance from the seacoast; thence S. 12 miles; thence in a S. 30° E. direction until the same shall strike within 5 miles of the main branch of Charlotte river; thence in a due E. direction to within 20 miles of the Atlantic coast; thence N. 15° W. for 50 miles, and from this last to the beginning point. The Indians having objected to being concentrated within the limits above described, for fear there was insufficient good land to subsist them, the U. S. agree that should said territory, after examination, be found to contain insufficient good land, then the N. line, as above defined, shall be removed so far N. as to embrace a sufficient quantity of good tillable land.

Schedule of Indian Land Cessions (56th Congress, 1st Session 1899:704) Describing Land Cession Number 118: Lands Ceded by the 'Florida Tribes' (Present-Day present day Miccosukee Tribe of Indians of Florida and Seminole Tribe of Florida)

LAND CESSIONS—Continued.

<i>Historical data and remarks</i>	<i>Designation of cession on map</i>	
	<i>Number</i>	<i>Location</i>
This reserve was ceded to the U. S. by treaty of Sept. 19, 1827. The boundaries were never ascertained. This reserve was ceded to the U. S. by treaty of Sept. 19, 1827 This reserve was ceded to the U. S. by treaty of Sept. 27, 1833 This reserve was ceded to the U. S. by treaty of Sept. 19, 1827. This reserve was ceded to the U. S. by treaty of Sept. 19, 1827.	See 138 See 188	Michigan 1.
An ordinance of Congress of Sept. 3, 1788, set apart three tracts of 4,000 acres each at Shoenbrun, Gnadenhutzen, and Salem, on Muskingum river, for the Society of United Brethren, to be used in propagating the gospel among the heathen. By act of Congress approved June 1, 1796, provision was made for surveying and patenting these tracts to the society in question, in trust for the benefit of the Christian Indians. Under the provisions of the act of Mar. 3, 1823, Lewis Cass was appointed to negotiate for the relinquishment of the title to the U. S. This he secured and transmitted the relinquishment of both the society and the Indians to the War Department, under date of Nov. 19, 1823, and by act of May 26, 1824, Congress made provision for the disposition of the lands.	See 4 See 5 See 6	Ohio.
	118	Florida.
The boundaries of this reserve were partly surveyed and the remainder approximated by Colonel Gadsden in 1824. They are shown by yellow lines. Colonel Gadsden recommended an addition to the reserve to include more tillable land. This addition was made by Executive order, July 29, 1824, and is shown by a crimson line. A second addition was made for a like purpose by the President, and Maj. J. A. Coffee surveyed the same in 1826. This second enlargement is shown by green lines. The reserve as thus enlarged was ceded to the U. S., May 9, 1832.	See 173	Florida.
This was done in 1824 and again in 1826 by Executive order, as set forth above.		

Schedule of Indian Land Cessions (56th Congress, 1st Session 1899:705) Describing Land Cession Number 118: Lands Ceded by the 'Florida Tribes' (Present-Day present day Miccosukee Tribe of Indians of Florida and Seminole Tribe of Florida)

SCHEDULE OF INDIAN

<i>Date</i>	<i>Where or how concluded</i>	<i>Reference</i>	<i>Tribe</i>	<i>Description of cession or reservation</i>
1831 Aug. 30	Miami bay of Lake Erie.	Stat. L., VII, 359.	Ottawa (residing in Ohio).	With a view to removing to the country W. of the Mississippi the band of Ottoways residing on Blanchard's fork of the Great Auglaize river and at Oquanoxie's village on the Little Auglaize river cede to the U. S. the following tracts of land reserved for them, respectively, by the sixth article of the treaty of Sept. 29, 1817: 1. A tract of land on Blanchard's fork of the Great Auglaize river, to contain 5 miles square, the center of which tract shall be where the old trace crosses said fork. 2. A tract to contain 3 miles square on the Little Auglaize river, to include Oquanoxie's village. The band of Ottoway Indians residing at and near the places called Roche de Boeuf and Wolf Rapids, on the Miami river of Lake Erie, wishing to become parties to this treaty and not being willing at this time, to stipulate for their removal W. of the Mississippi agree, in consideration of the stipulations herein made for them by the U. S., to cede to the U. S. the following tracts of land reserved to them by the treaty of Nov. 17, 1807, viz: 1. A tract of 6 miles square above Roche de Boeuf, to include the village where Tondagonie (or Dog) formerly lived. 2. A tract of 3 miles square at the Wolf Rapids aforesaid, which was substituted for the 3 miles square granted, by the treaty of Nov. 17, 1807, to the said Ottoways, to include Presque Isle, but which could not be granted, as stipulated in said treaty, in consequence of its collision with the grant of 12 miles square to the U. S. by the treaty of Greenville in 1795. The U. S. agree to cause the band of Ottoways residing on Blanchard's fork and at Oquanoxie's village, numbering about 200 souls, to be removed to the western side of the Mississippi river, and will grant by patent in fee simple to them and their heirs forever, as long as they shall exist as a nation and remain upon the same, a tract of land to contain 34,000 acres, to be located adjoining the S. or W. line of the reservation granted to the Shawnees of Missouri and Ohio, on the Kansas river and its branches, by treaty of Nov. 7, 1825. The U. S. agree to grant to the band of Ottoways residing at Roche de Boeuf and Wolf Rapids, by patent in fee simple, 40,000 acres of land W. of the Mississippi, adjoining the lands assigned to the Ottoways of Blanchard's fork and Oquanoxie's village, or in such other situation as they may select on the unappropriated lands in the district of country designed for the emigrating Indians of the U. S. Whenever said band shall accept of said grant, the U. S. agree to remove and subsist them in the same manner as is provided by this treaty for the removal of the Ottoways of Blanchard's fork and Oquanoxie's village.
1832 Jan. 19	McCutchensville, Crawford county, Ohio.	Stat. L., VII, 364.	Wyandot (band residing at Big Spring).	The band of Wyandots residing at the Big Spring, in the county of Crawford in the state of Ohio, cede to the U. S. the reservation of 16,000 acres, granted to them by article 2 of the treaty of Sept. 17, 1818, described in said treaty as follows: "There shall be reserved for the use of the Wyandots residing at Solomon's town and on Blanchard's fork 16,000 acres of land, to be laid off in a square form on the head of Blanchard's fork; the center of which shall be at the Big Spring on the road leading from Upper Sandusky to Fort Findlay."
Mar. 24	Washington, D. C.	Stat. L., VII, 366.	Creek.....	The Creek tribe of Indians cede to the U. S. all their land E. of the Mississippi river.
May 9	Payne's Landing, Florida territory.	Stat. L., VII, 368.	Seminole.....	The Seminole Indians relinquish to the U. S. all claim to lands occupied by them in the territory of Florida and agree to emigrate to the country W. of the Mississippi river. The U. S. agree that an additional extent of territory for the Seminoles, proportioned to their numbers, shall be added to the Creek country, and that the Seminoles will be received as a constituent part of the Creek nation.

Schedule of Indian Land Cessions (56th Congress, 1st Session 1899:734) Describing Land Cession Number 173: Lands Ceded by the 'Seminole' (Present Day Seminole Tribe of Florida and Seminole Nation of Oklahoma)

LAND CESSIONS—Continued.

<i>Historical data and remarks</i>	<i>Designation of cession on map</i>	
	<i>Number</i>	<i>Location</i>
	167	Ohio (detail).
	168	
	169	
	170	
These bands became confederated after their removal to the reservations assigned them by this treaty, and by a subsequent treaty of June 24, 1862, they made a joint cession of the reserves to the U. S. On Kansas map 2 of this schedule the entire reserve of both bands is colored yellow and numbered 435. The tract originally assigned to the Ottawa of Blanchard's fork and Oquanoxa's village is shown within the red lines.	See 435.	Kansas 2.
	171	Ohio (detail).
	172	Alabama.
See note concerning this tract under treaty of Sept. 18, 1823, with the Florida Indians. The boundaries of this tract are defined in the treaty of Mar. 28, 1833. (See also treaty of Jan. 4, 1845, with the Creeks and the Seminole for modification of this provision; again modified by treaty of Aug. 7, 1856.)	173	Florida.

Habitat Descriptions

Appendix 9A6-4
Habitat Descriptions
230-kV BBW Primary and Secondary Corridors

Open Land/Improved and Unimproved Pastures (FLUCCS 190/211/212)

These habitats are discussed together due to their similarity in species composition and function. These areas are typically utilized for cattle grazing which has been cleared, tilled, and reseeded with specific grass types and improved with brush control and fertilizers, or are undeveloped land within urban areas and inactive land with street patterns but no structures (FDOT, 1999). Dominant vegetative species observed include grasses such as bahia grass (*Paspalum notatum*), crab grass (*Digitaria* spp.), and bluestem (*Andropogon virginicus*), shrubs such as saw palmetto (*Serenoa repens*) and wax myrtle (*Myrica cerifera*), and occasional trees such as longleaf pine (*Pinus palustris*), loblolly pine (*Pinus taeda*), water oak (*Quercus nigra*), and live oak (*Quercus virginiana*).

Shrub and Brushland (FLUCCS 320)

Shrub and brushland areas are mostly dominated by saw palmetto intermixed with a wide variety of other woody scrub plant species, as well as various types of short herbs and grasses. The canopy component is typically sparse (FDOT, 1999). In addition to the saw palmetto understory, other common species observed within shrub and brushland areas include sparse areas of slash pine (*Pinus elliotii*), Chapman's oak (*Quercus chapmanii*), sand live oak (*Quercus geminata*), laurel oak (*Quercus laurifolia*), persimmon (*Diospyros virginiana*), cabbage palm (*Sabal palmetto*), water oak, live oak, winged sumac (*Rhus copallinum*), gallberry (*Ilex glabra*), common ragweed (*Ambrosia artemisiifolia*) and muscadine grape (*Vitis rotundifolia*).

Pine Flatwoods (FLUCCS 411)

Pine flatwoods are common habitats throughout central Florida, typically occurring on flat, well-drained soils (FDOT, 1999). Pine flatwoods along the preferred corridors are dominated by a canopy of slash pine (*Pinus elliotii*) with an understory of saw palmetto. A variety of subdominant canopy species are present, including water oak, live oak, cabbage palm (*Sabal palmetto*), loblolly pine, laurel oak (*Quercus laurifolia*), and sand live oak (*Quercus geminata*), while shrub and groundcover species include gallberry (*Ilex glabra*), wax myrtle, winged sumac (*Rhus copallina*), American beautyberry (*Callicarpa americana*), muscadine grape (*Vitis rotundifolia*), and Virginia creeper (*Parthenocissus quinquefolia*).

Longleaf Pine - Xeric Oak (FLUCCS 412)

This forest type is dominated by longleaf pines and is distinguishable from longleaf dominated pine flatwoods by the presence of a subcanopy of sand live oak, live oak, and bluejack oak (*Quercus incana*) with a ground cover dominated by saw palmetto (FDOT, 1999).

Sand Pine (FLUCCS 413)

Sand pine (*Pinus clausa*) grows on deep, infertile deposits of marine sands and clays. The Ocala variety of the peninsular Florida occurs in densely-stocked, pure, even-aged stands (FDOT, 1999). In addition to sand pine, other dominant vegetation observed in this community includes turkey oak (*Quercus laevis*), scrub oak (*Quercus inopina*), laurel oak, sand live oak, saw palmetto, rusty lyonia (*Lyonia ferruginea*), wild rosemary (*Ceratiola ericoides*), wild olive (*Osmanthus* sp.), and wiregrass.

Hardwood-Conifer Mixed Forests (FLUCCS 434)

Hardwood-coniferous mixed forest habitats are areas in which neither upland conifers nor hardwoods achieve at 66 percent crown canopy dominance (FDOT, 1999). The canopy is dominated by a mixture of loblolly pine, longleaf pine, laurel oak, live oak, sand live oak, and black cherry (*Prunus serotina*). Common shrub species include saw palmetto, gallberry, and wax myrtle, while groundcover plants and vines include wiregrass and greenbrier (*Smilax* spp.).

Coniferous Plantations (FLUCCS 441)

These areas are characterized by monocultures of planted loblolly pine, slash pine, or sand pine (*Pinus clausa*) in uniform age classes and in rows. Some areas of planted pines in the lower wetter areas of the corridor also may contain volunteer red maple (*Acer rubrum*), swamp bay (*Persea palustris*), slash pine, water oak, and laurel oak.

Lakes/Reservoirs (FLUCCS 520/530)

These habitats are discussed together due to their similarity in species composition and function. Several small lakes and reservoirs were observed along the 230-kV BBW Secondary Corridor. Dominant vegetation observed within or adjacent to these surface water bodies include red maple, swamp bay, pond cypress (*Taxodium ascendens*), coastal plain willow (*Salix caroliniana*), cattail (*Typha* sp.), common buttonbush (*Cephalanthus occidentalis*), false-willow (*Baccharis angustifolia*), Peruvian primrose willow (*Ludwigia peruviana*), maidencane (*Panicum hemitomon*), smartweed (*Polygonum hydropiperoides*), and lance-leaved arrowhead (*Sagittaria lancifolia*).

Freshwater Marshes (FLUCCS 641)

Areas of freshwater marsh are located within the 230-kV BBW Secondary Corridor. Freshwater marshes are typically dominated by shrub and herbaceous species (FDOT, 1999), including common buttonbush, maidencane, redroot (*Lachnanthes caroliniana*), buttonweed (*Diodia virginiana*), marsh fern (*Thelypteris palustris*), Virginia chain fern, smartweed, lance-leaved arrowhead, soft rush (*Juncus effusus*), marsh pennywort (*Hydrocotyle* spp.), pickerelweed, flat sedges (*Cyperus* spp.) and caric sedges (*Carex* spp.).

Wet Prairies (FLUCCS 643)

Wet prairie is an infrequently inundated wetland habitat with predominantly herbaceous vegetation occurring upon hydric soils (FDOT, 1999). Dominant vegetation includes bushy bluestem (*Andropogon glomeratus*), soft rush (*Juncus effusus*), dog fennel (*Eupatorium capillifolium*), coinwort (*Centella asiatica*), torpedo grass (*Panicum repens*), meadow beauty (*Rhexia* spp.), St. John's-wort

(*Hypericum sp.*), camphorweed (*Pluchea spp.*), bog button (*Lachnocaulon spp.*), maidencane (*Panicum hemitomon*), and marsh pennywort (*Hydrocotyle umbellata*).

Intermittent Ponds (FLUCCS 653)

This category of wetland is defined as a waterbody which exists for only a portion of the year. It may be referred to as a seasonal waterbody. Its existence relies upon water received directly from precipitation, runoff or spring flow (FDOT, 1999). Plant species observed include dog fennel, coastal plain willow (*Salix caroliniana*), hairy indigo (*Indigofera hirsuta*), red ludwigia (*Ludwigia repens*), bahiagrass, eastern false-willow (*Baccharis halimifolia*), sawtooth blackberry (*Rubus argutus*), goldenrod (*Solidago spp.*), winged sumac, bushy bluestem, and bluestem.

Disturbed Lands (FLUCCS 740)

Disturbed lands are those areas which have been changed due primarily to human activities other than mining (FDOT, 1999). Common plants observed include dog fennel, hairy indigo, persimmon (*Diospyros virginiana*), bahiagrass, American pokeweed (*Phytolacca americana*), Virginia creeper, American beautyberry, and winged sumac.
