Re: Seminole Electric Cooperative, Inc.
PA 78-10K
Post-Certification Compliance Review
Landfill Increment 1

Dear Mike and Ann:

On behalf of Seminole Electric Cooperative, Inc. (SECI) and pursuant to Rule 62-17.191, Florida Administrative Code, this letter transmits the post-certification review information for the previously-approved Landfill Increment 1 as required under Conditions of Certification XII.D.; E. F. and G. for the Seminole Generating Station (SGS) in Putnam County, Florida.

Included with this submittal are the final construction drawings, retention pond design calculations, wetland jurisdictional determination, and other relevant project information addressing construction of a 29 acre double-lined landfill increment and associated stormwater pond as outlined in the aforementioned conditions of certification.

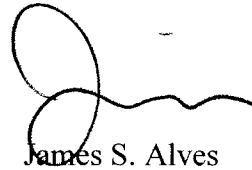

As we discussed during our meeting on July 15, 2010, SECI respectfully requests expedited agency review and approval of this post-certification compliance review item as SECI wishes to begin construction for this project no later than January, 2011.
