# **ATTACHMENT A – STATEMENT OF AVOIDANCE AND MINIMIZATION OF IMPACTS**

---

# Attachment A—Statement of Avoidance and Minimization

## **PROPOSED IMPACTS**

The Project will impact a total of 0.03 acres of surface waters (manmade ditch). Due to the nature of the project, these impacts will be temporary in nature and will result from open cutting the existing ditch to install the utilities. Other typical construction activities, such as vegetation clearing, light raking, temporary construction matting, and ground disturbance from construction vehicles may occur during installation. It is anticipated that construction activities will meet the requirements under 62-330.457 General Permit for Subaqueous Utility Crossings of Artificial Waterways. TEC will comply with the conditions for 62-330.457 as shown in Attachment I.

For purposes of this application, all impacts are considered temporary. Construction and restoration activities near wetlands and water bodies will employ best management practices to minimize impacts to wetlands, such as those found in the exhibit included in Attachment E.

Section C Form Table 1 summarizes the wetland and water body impacts by type, and provides the impact type for each wetland and water body within the proposed project impact area.

Figure 6 depicts the location of the proposed wetland and water body impacts within the proposed project footprint.

## **Water Body Impacts**

The water body impacts are proposed to be temporary in nature and limited to the construction time frame, which is expected to be approximately 24 months.

## **ELIMINATION OR REDUCTION OF IMPACTS**

Impacts to wetlands and water bodies were eliminated or reduced to the extent practicable by using the following standards:

- Identification of an area or areas on the power plant site that will meet project objectives while avoiding and minimizing environmental impacts
- Locating permanent structures and other project features in uplands
- Limiting the construction to previously disturbed areas wherever practicable
- Minimizing impacts to sensitive environmental features by using specialized construction techniques, such as matting, where appropriate
- Locating temporary workspaces and access areas within existing utility areas or in other upland areas
- Implementing BMPs and effective soil erosion control measures (e.g., silt fence, straw bales), including routine inspections during construction and until soil stabilization has occurred
- Minimizing the construction duration to limit the disturbance to natural resources

# ATTACHMENT B – PUBLIC INTEREST STATEMENT

## **Attachment B - Public Interest Statement**

Impacts on terrestrial and aquatic systems and species associated with preparation and construction depend primarily on the location and existing conditions of the selected project footprint and, to a lesser degree, on clearing and construction techniques.

Through a systematic, environmentally responsive selection process, the crossing of major terrestrial, wetland, and aquatic systems was minimized or avoided to restrict potential impacts to sensitive habitats and/or endangered and threatened species associated with construction. By selecting a previously altered area, it is not anticipated that construction of this project will have significant impact on vegetation, wildlife, or aquatic life.

Because the project footprint contains lands that have already been cleared and maintained, construction should not pose any significant additional adverse changes to vegetation in these areas. Limited permanent alterations will be associated with clearing, temporary matting and temporary impacts associated with the open-cut for pipe installation. The proposed project crosses no large expanses of forested uplands or wetlands.

Attachment D - Clearing and Demolition Plans and Attachment E - Temporary Erosion and Sediment Control Plan as well as Figure 6 - Wetlands and Surface Waters Impacts Map, address types of impacts associated with construction that are expected to occur to the existing vegetation communities crossed by the project footprint. Adjacent vegetation communities should not be affected by temporary access, tank or pipeline installation because erosion and sediment control measures will be used. No clearing or filling of wetlands is proposed.

Specific impacts to terrestrial and aquatic animals due to construction vary by species and depend primarily on the extent of habitat alteration and continued availability of such habitat after construction. The proposed project crosses no federally designated critical habitat. In addition, no aquatic habitats critical to the continued regional presence of important species will be affected.

The project is not expected to significantly impact wildlife or wildlife habitat. Some temporary displacement of wildlife may occur during construction activities, however once complete, wildlife is anticipated to return. The project is not in an area designated as Outstanding Florida Waterway. No in-water work is proposed therefore no adverse effects to navigation or flow is anticipated. Similarly, no adverse effects to fishing or recreation is anticipated with the operation of the facility once construction is completed. Adequate and appropriate erosion control measures will be maintained during construction to prevent sedimentation at surface waters.

A cultural resource assessment survey was completed as part of the previously certified project in compliance with the requirements of Chapter 267, F.S., and Chapter 1A-46 (Archaeological and Historical Report Standards and Guidelines), F.A.C. The results of this survey have been documented in a report and submitted to DHR in 1991. No significant resources were identified.

If cultural resource finds are discovered during construction, construction activities will be immediately halted in the vicinity, and DHR will be notified. A determination of the significance of the find will be conducted, as appropriate, and TEC will coordinate with DHR to evaluate mitigative measures necessary to protect the area from adverse effects.
