

APPENDIX 10.4

ENVIRONMENTAL RESOURCE PERMIT

10.4 ENVIRONMENTAL RESOURCE PERMIT

As discussed in Section 4.8 of this SCA, the proposed Polk 2-5 Conversion Project onsite facilities will be constructed within areas already considered as developed for such facilities in the approved drainage plan for PPS. Also the proposed Project will not change the approved, existing drainage patterns and systems. The existing stormwater pond was previously designed and constructed with adequate storage and water quality treatment capacity to handle runoff from the proposed Project facilities areas. Therefore, a new or revised stormwater management plan and related environmental resource permit (ERP) information are not needed for the proposed Project.

Potential wetland impacts and stormwater management measures for the new offsite transmission lines associated with the Project will be addressed as a post-certification submittal requirement, and applicable ERP application information will be submitted as part of the postcertification requirements.
